

# EZO-EC™

**Embedded Conductivity Circuit**

**ISO 7888 Compliant**

(determination of electrical conductivity)

Reads

**Conductivity =  $\mu\text{S}/\text{cm}$**

**Total dissolved solids = ppm**

**Salinity = PSU (ppt) 0.00 – 42.00**

**Specific gravity**

**(sea water only) = 1.00 – 1.300**

Range

**0.07 – 500,000+  $\mu\text{S}/\text{cm}$**

Accuracy

**+/- 2%**

EC reading time

**600ms**

Supported probes **K 0.01 – K 10.2 any brand**

Calibration

**2 or 3 point**

Temp compensation

**Yes**

Data protocol

**UART & I<sup>2</sup>C**

Default I<sup>2</sup>C address

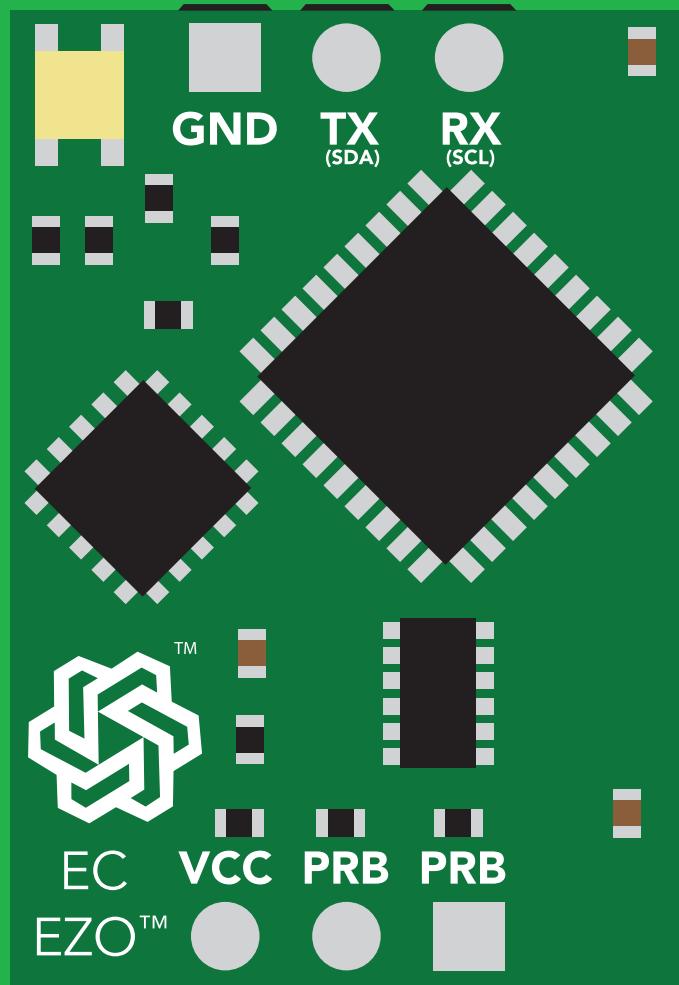

**100 (0x64)**

Operating voltage

**3.3V – 5V**

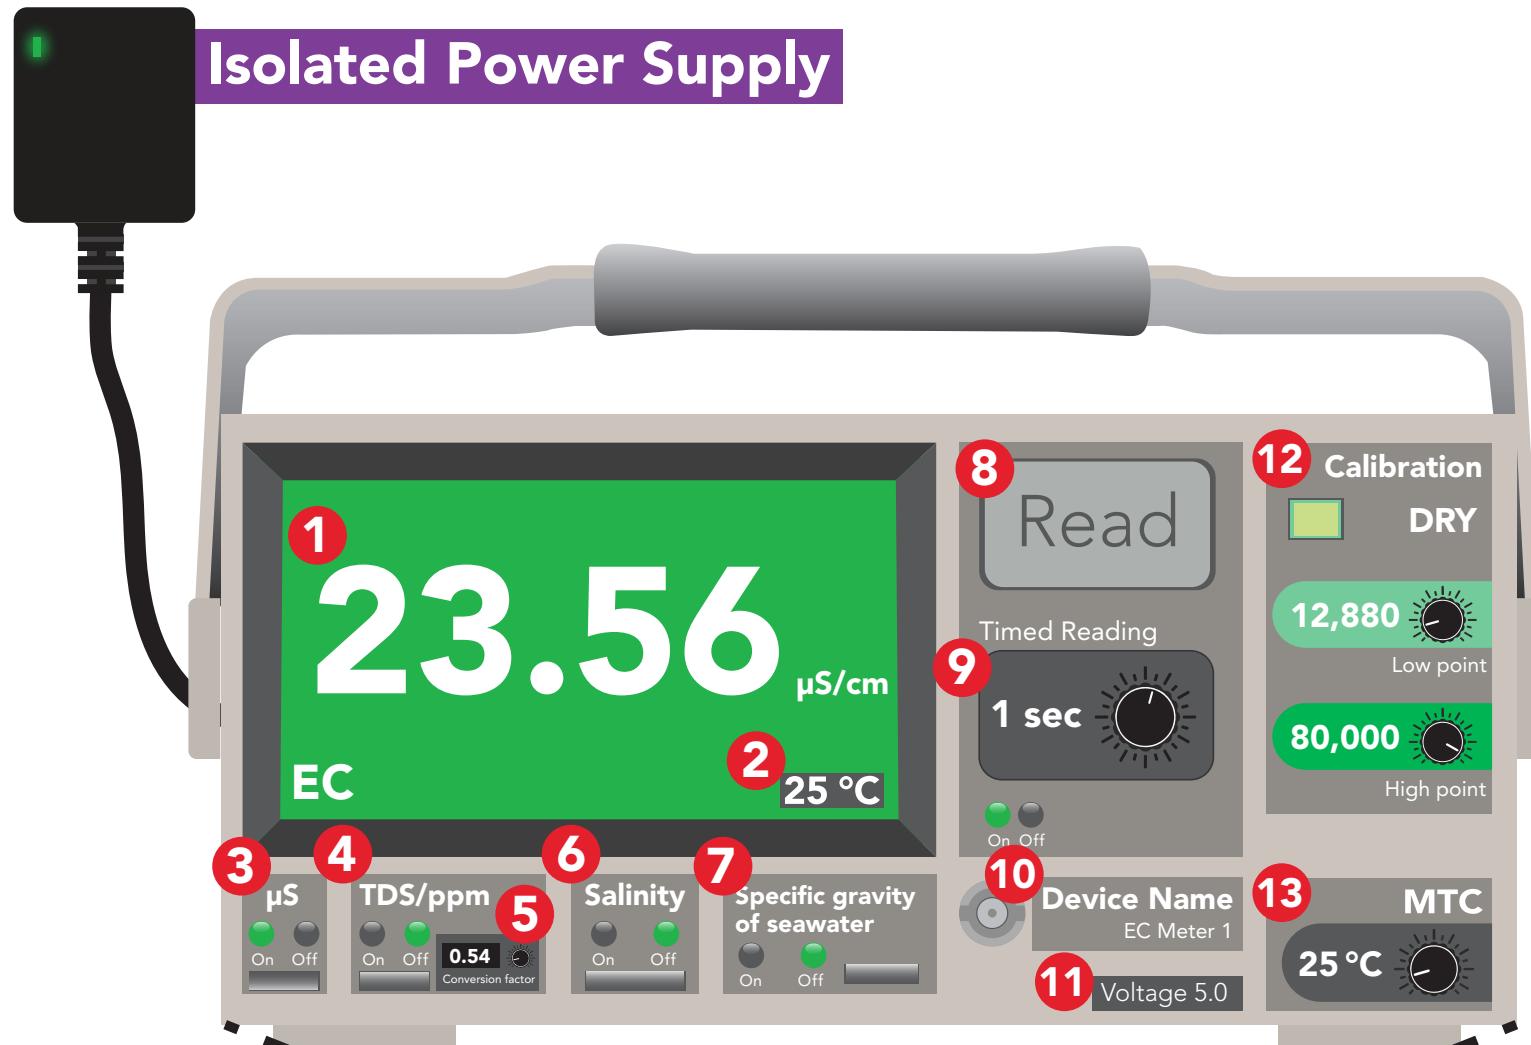

Data format

**ASCII**

**PATENT PROTECTED**

The EZO™ EC Circuit has all the features of this bench top meter.

- 1 Multi decimal EC reading
- 2 Temperature used for reading
- 3 Enable EC readings
- 4 Enable TDS/ ppm readings
- 5 Variable TDS conversion factor
- 6 Enable salinity readings
- 7 Enable specific gravity readings

- 8 Immediate reading
- 9 Timed readings
- 10 Set device name
- 11 Voltage usage
- 12 Multi-point variable calibration
- 13 Temperature compensation

The EZO Complete-EC™ is compatible with any brand of EC probe from K 0.01–K10.2

# Conductivity probe range

The EZO™ Conductivity circuit is compatible with any brand of two-conductor conductivity probe, ranging from:

**K 0.01**

**K 10.2**

Atlas Scientific™ has tested three different K value probe types:

**K 0.1**

**K 1.0**

**K 10**

**accurate reading range**

**0.07µS/cm – 50,000µS/cm**

TDS (ppm) 0 – 25,000

Salinity (ppt) 0 – 33

**accurate reading range**

**5µS/cm – 200,000+µS/cm**

TDS (ppm) 2 – 100,000

Salinity (ppt) 0 – 42\*

*\*salinity scale cannot go any higher*

**accurate reading range**

**10µS/cm – 1S/cm**

TDS (ppm) 5 – 500,000

Salinity (ppt) 0 – 42\*

*\*salinity scale cannot go any higher*

Atlas Scientific™ does not know what the accurate reading range would be for conductivity probes, other than the above mentioned values. Determining the accurate reading range of such probes, i.e. **K 2.6**, or **K 0.66**, is the responsibility of the embedded systems engineer.

# Resolution

The EZO™ Conductivity circuit, employs a method of scaling resolution. As the conductivity increases the resolution between readings decreases.

The EZO™ Conductivity circuit will output conductivity readings where the first **4 digits** are valid and the others are set to 0. This excludes conductivity readings that are less than 9.99. In that case, only 3 conductivity digits will be output.

0.07 – 99.99

Resolution = **0.01 $\mu$ S/cm**

100.1 – 999.9

Resolution = **0.1 $\mu$ S/cm**

1,000 – 9,999

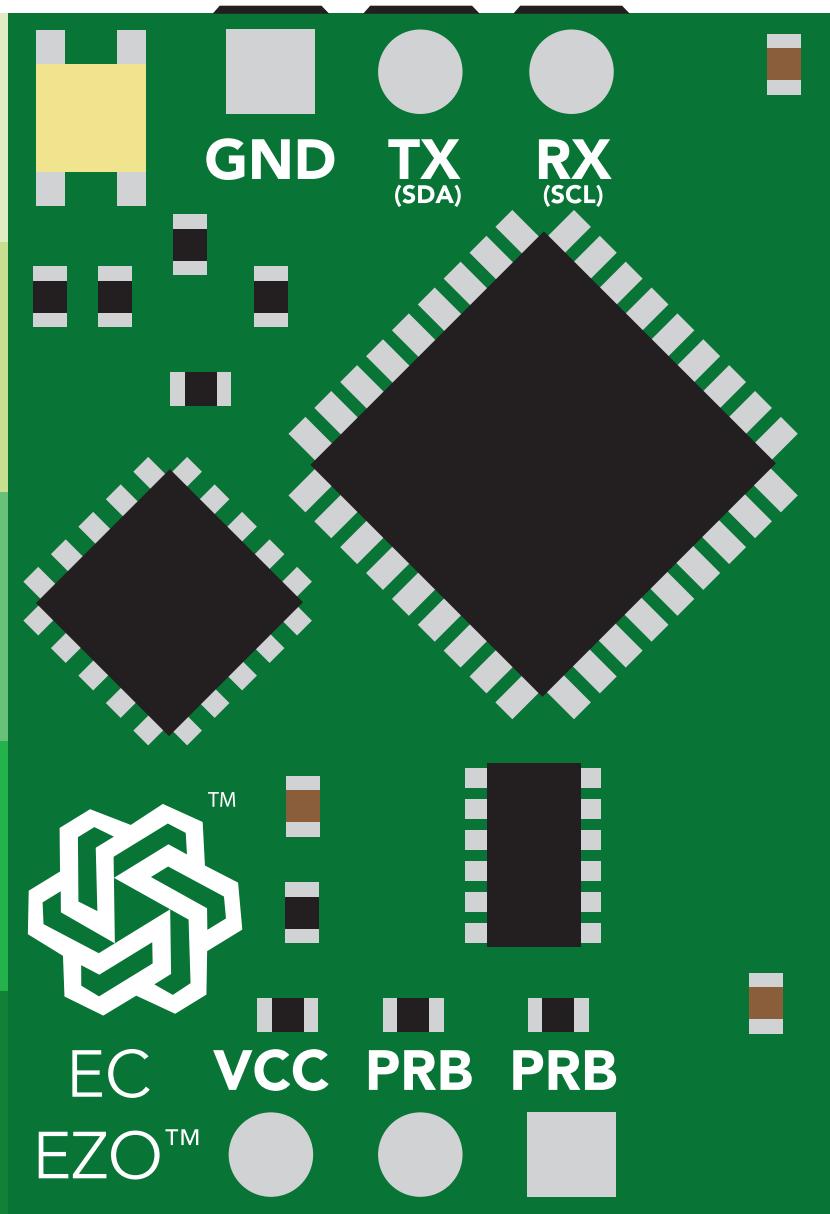

Resolution = **1.0 $\mu$ S/cm**

10,000 – 99,990

Resolution = **10 $\mu$ S/cm**

100,000 – 999,900

Resolution = **100 $\mu$ S/cm**

 Available data protocols

**UART**

**Default**

**I<sup>2</sup>C**

 Unavailable data protocols

**SPI**

**Analog**

**RS-485**

**Mod Bus**

**4–20mA**

# STOP

SOLDERING THIS DEVICE VOIDS YOUR WARRANTY.

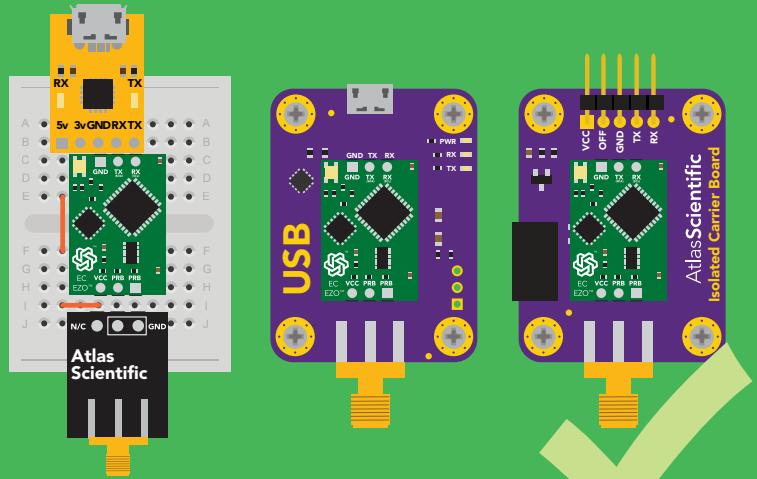

Are there specific soldering instructions? Yes, see page 73.

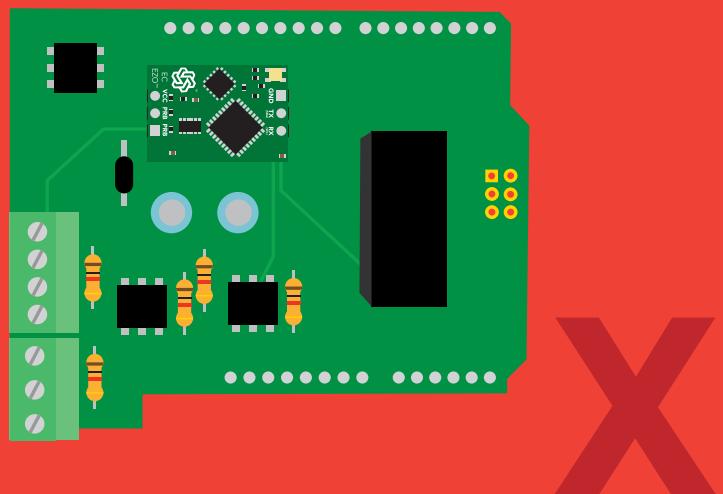

Can you make a warranty claim after soldering? No.

If you have not used this product before; Observe how a properly working sensor behaves **BEFORE** embedding it into your PCB.

Get this device working using one of these methods first.

Do not embed before you have experience with this sensor.

Operational temperature (EZO™ Conductivity)	-40 °C	25 °C	125 °C
VCC	3.3V	5V	5.5V

# Electrical isolation

Conductivity readings will introduce significant electrical interference into your water. This electrical interference will affect other sensors, such as pH, ORP, and dissolved oxygen. Electrical isolation is 100% effective in preventing this electrical interference.

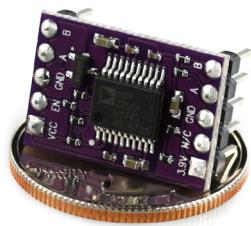

Unlike other probes, a conductivity probe provides a low-resistance pathway from your water to your electronics. If an accidental electrical surge passes through your water, it will travel up your conductivity probe and into your electronics. Electrical isolation is 100% effective at stopping an accidental electrical surge from destroying your computer system.

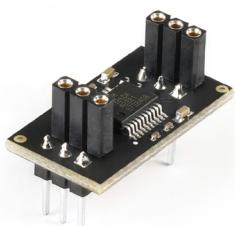

## Advice:

When reading conductivity along with other sensors, electrical isolation is strongly recommended.  
**Never build a commercial product without electrical isolation.**

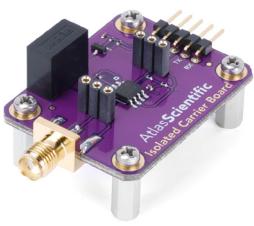

Atlas Scientific offers several different electrical isolation products that can be used in your design. Select the electrical isolation product that works best for your design.

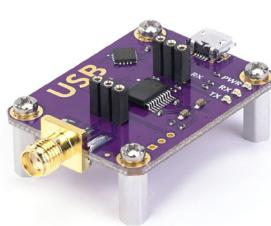

Basic EZO™  
Inline Voltage Isolator

Vertical Isolator

Electrically Isolated  
EZO™ Carrier Board

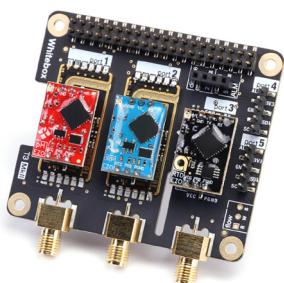

Gen 2 Electrically Isolated  
USB EZO™ Carrier Board

Whitebox T1

Whitebox T3

Whitebox T3

Electrically Isolated EZO™  
Carrier Board (old style)

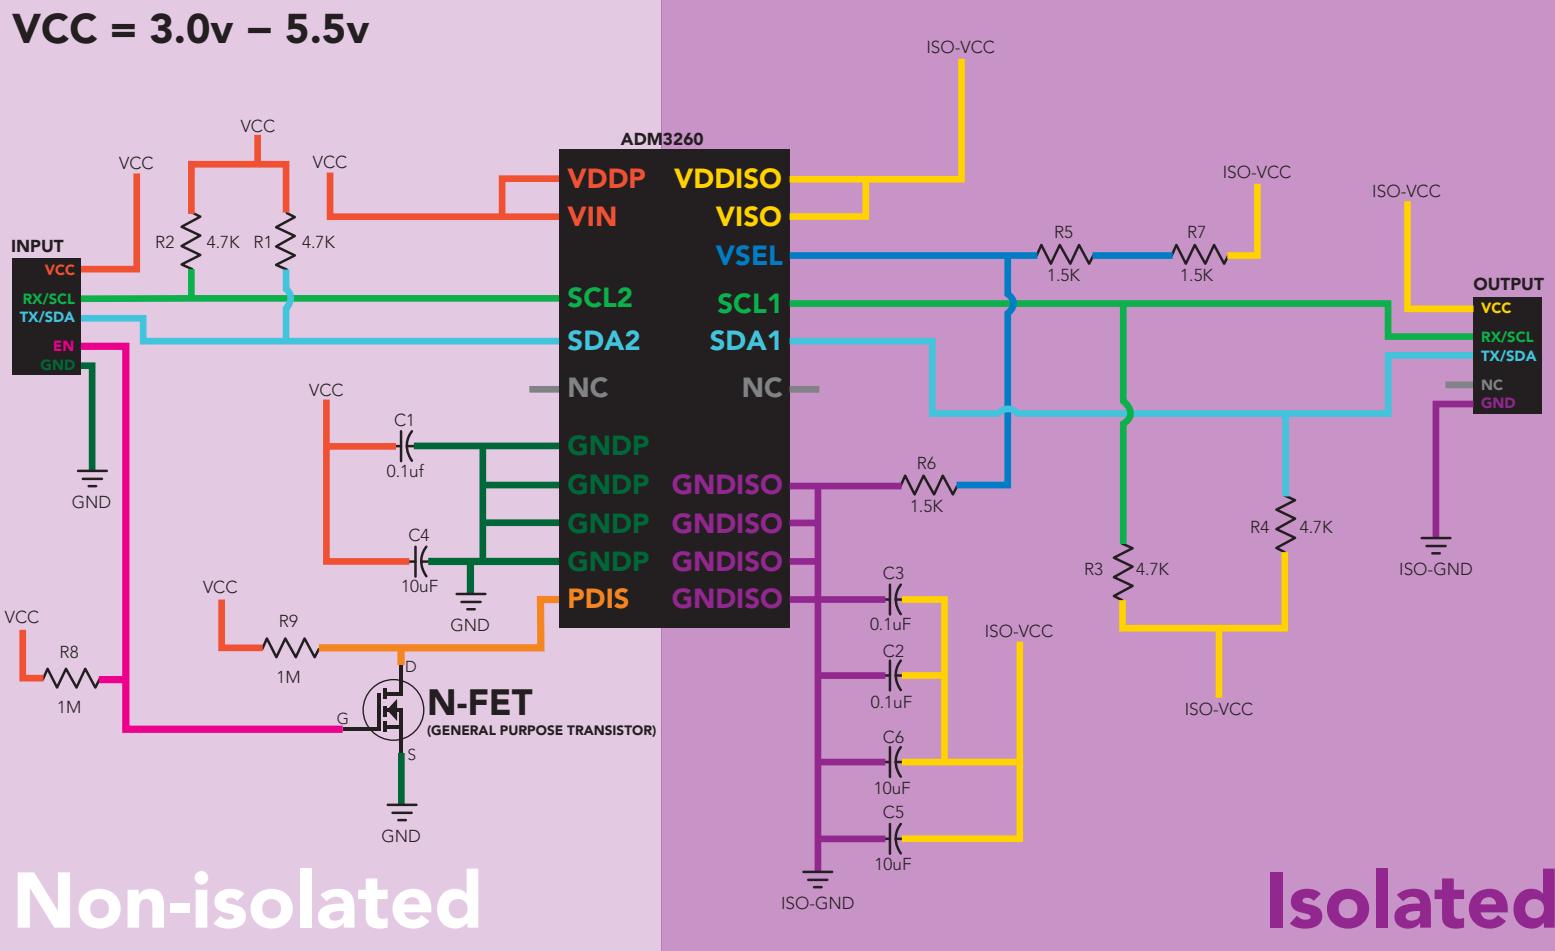

For various reasons, you may need to build your own electrical isolator. Because electrical isolation is so important, we have published our isolation schematic for anyone to use.

This isolation schematic is based on the ADM3260, which can output up to 150 mW of isolated power. PCB layout requires special attention for EMI/EMC and RF Control. Having good ground planes and keeping the capacitors as close to the chip as possible are crucial for proper performance.

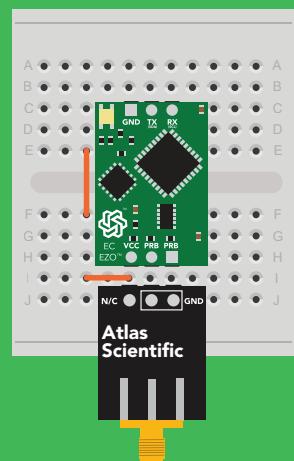

The two data channels have a  $4.7\text{k}\Omega$  pull-up resistor on both the isolated and non-isolated lines (R1, R2, R3, and R4). The output voltage is set using a voltage divider (R5, R6, and R7). This produces a voltage of 3.9V regardless of your input voltage.

**Isolated ground is different from non-isolated ground, these two lines should not be connected together.**

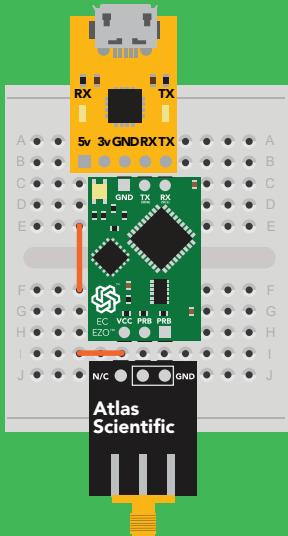

**VCC = 3.0v – 5.5v**

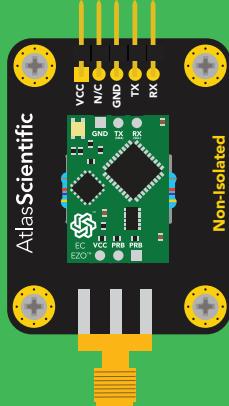

# ✓ Correct wiring

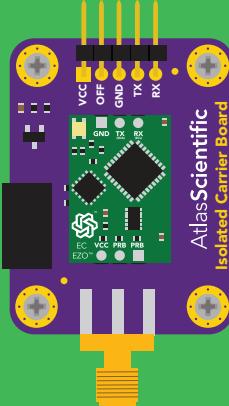

Bread board

Bread board via USB

Non-Isolated  
EZO™ Carrier Board

Electrically Isolated  
EZO™ Carrier Board

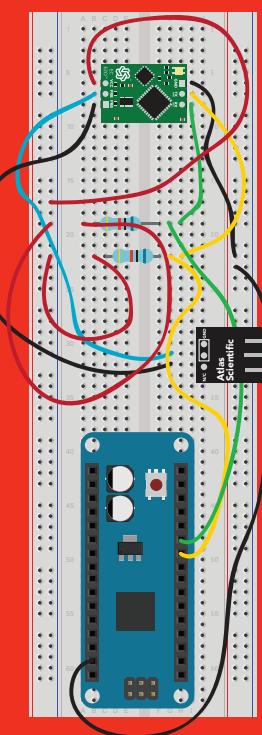

USB  
carrier board

# ✗ Incorrect wiring

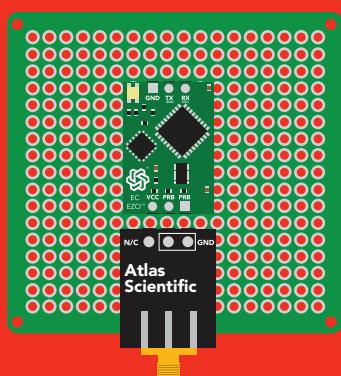

Extended leads

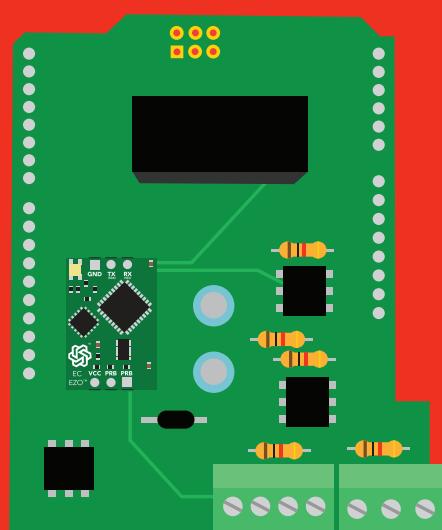

Sloppy setup

Perfboards or Protoboards

\*Embedded into your device

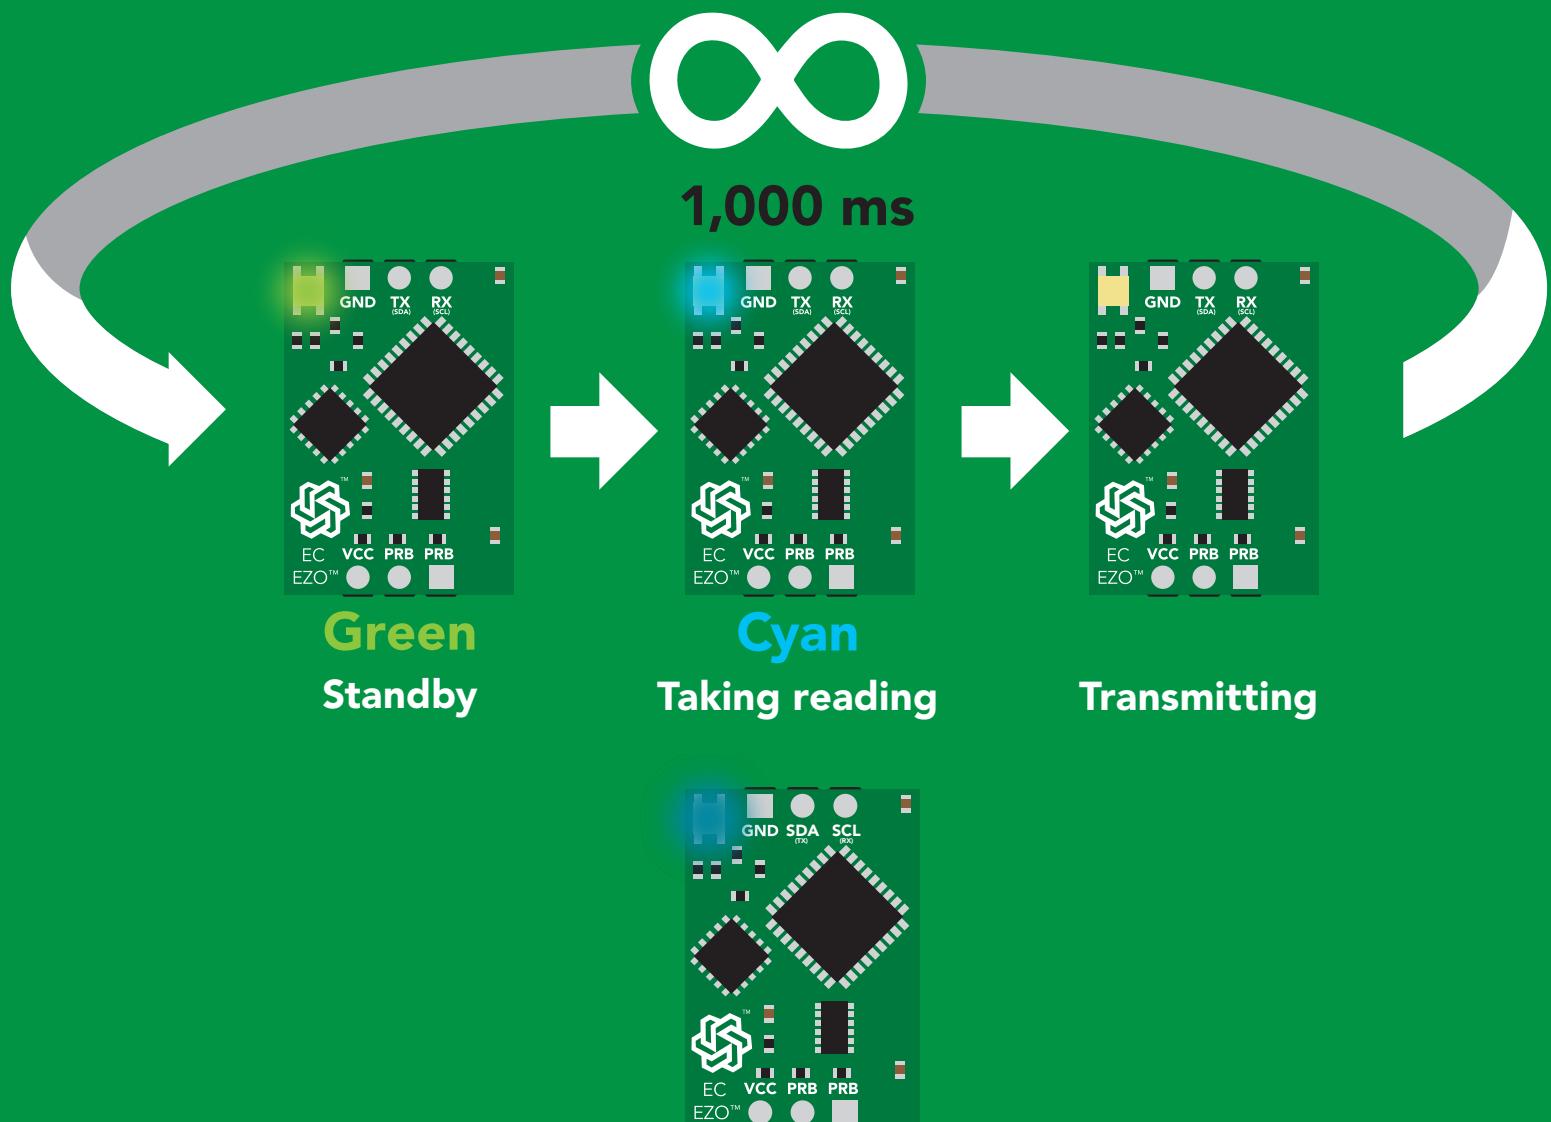

**NEVER**  
use Perfboards or Protoboards  
*Flux residue and shorting wires make it very hard to get accurate readings.*

**\*Only after you are familiar with EZO™ circuits operation**

## command quick reference

All commands are ASCII strings or single ASCII characters.

Command	Function	Default state
Baud	change baud rate	pg. 34 9,600
C	enable/disable continuous reading	pg. 20 enabled
Cal	performs calibration	pg. 22 n/a
Export	export calibration	pg. 24 n/a
Factory	enable factory reset	pg. 36 n/a
Find	finds device with blinking white LED	pg. 19 n/a
i	device information	pg. 30 n/a
I2C	change to I <sup>2</sup> C mode	pg. 37 not set
Import	import calibration	pg. 25 n/a
K	Set probe type	pg. 26 K 1.0
L	enable/disable LED	pg. 18 enabled
Name	set/show name of device	pg. 29 not set
O	enable/disable parameters	pg. 28 all enabled
Plock	enable/disable protocol lock	pg. 35 disabled
R	returns a single reading	pg. 21 n/a
Sleep	enter sleep mode/low power	pg. 33 n/a
Status	retrieve status information	pg. 32 enable
T	temperature compensation	pg. 27 25°C
TDS	change the TDS conversion factor	pg. 23 0.54
*OK	enable/disable response codes	pg. 31 enable

# LED control

## Command syntax

L,1 <cr> LED on **default**

L,0 <cr> LED off

L,? <cr> LED state on/off?

### Example

L,1 <cr>

\*OK <cr>

L,0 <cr>

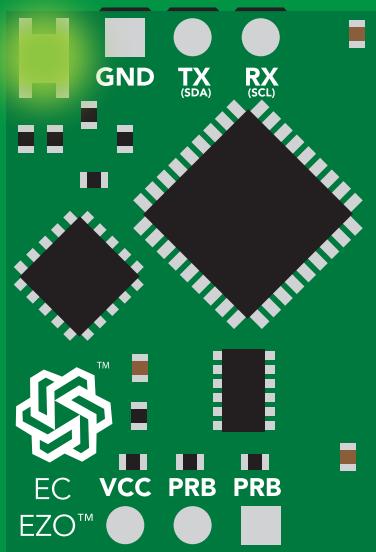

\*OK <cr>

L,? <cr>

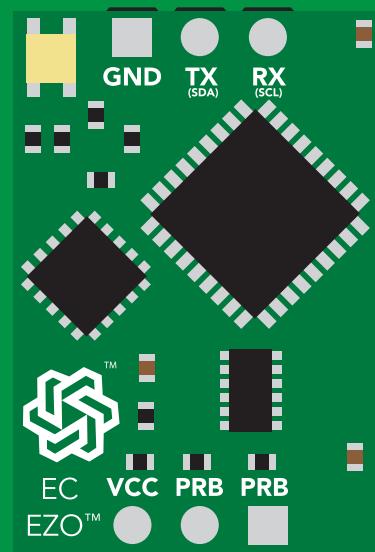

?L,1 <cr> or ?L,0 <cr>

\*OK <cr>

L,1

L,0

# Find

## Command syntax

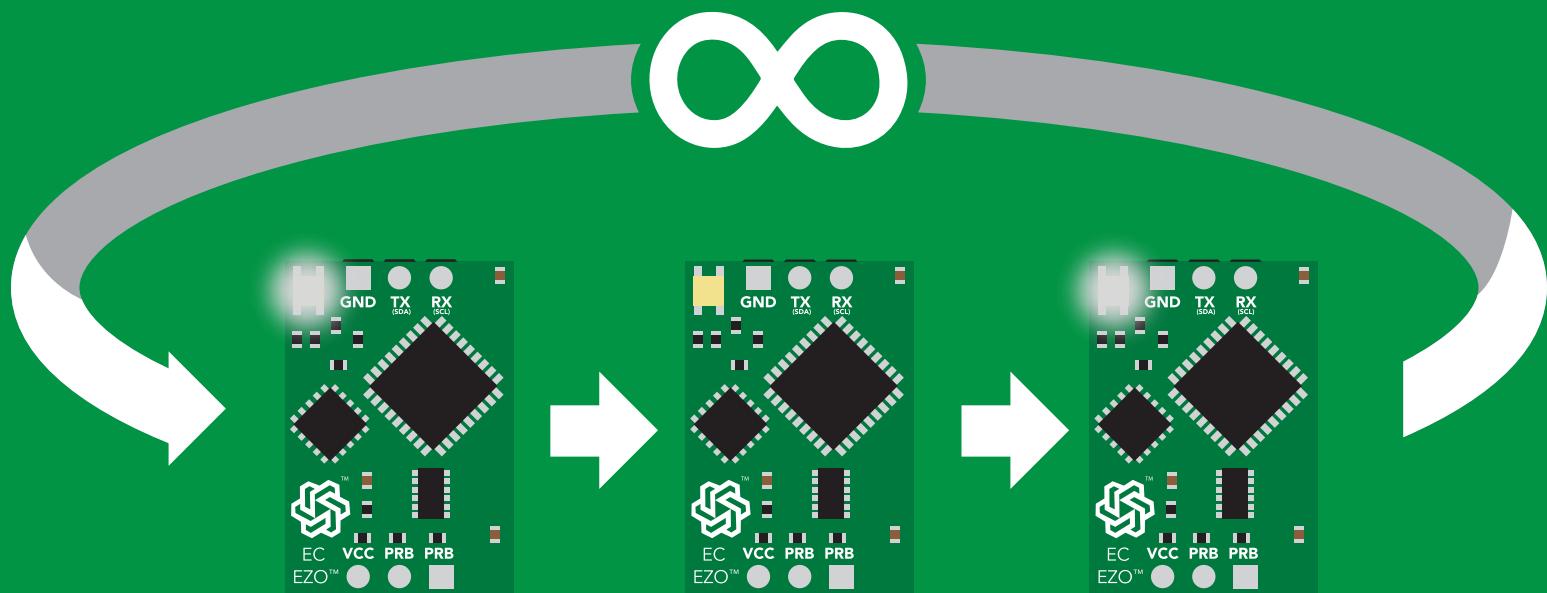

This command will disable continuous mode  
Send any character or command to terminate find.

Find <cr> LED rapidly blinks white, used to help find device

## Example Response

Find <cr>

\*OK <cr>

# Continuous reading mode

## Command syntax

- C,1 <cr> enable continuous readings once per second **default**
- C,n <cr> continuous readings every n seconds (n = 2 to 99 sec)
- C,0 <cr> disable continuous readings
- C,? <cr> continuous reading mode on/off?

## Example      Response

C,1 <cr>	*OK <cr> EC,TDS,SAL,SG (1 sec) <cr> EC,TDS,SAL,SG (2 sec) <cr> EC,TDS,SAL,SG (3 sec) <cr>
C,30 <cr>	*OK <cr> EC,TDS,SAL,SG (30 sec) <cr> EC,TDS,SAL,SG (60 sec) <cr> EC,TDS,SAL,SG (90 sec) <cr>
C,0 <cr>	*OK <cr>
C,? <cr>	?C,1 <cr> or ?C,0 <cr> or ?C,30 <cr> *OK <cr>

# Single reading mode

## Command syntax

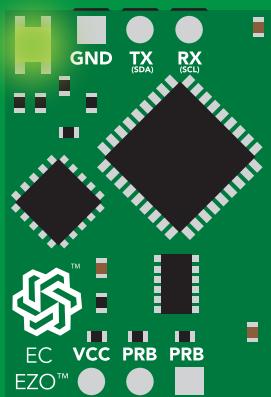

R <cr> takes single reading

### Example Response

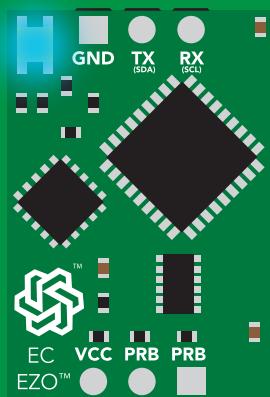

R <cr>

1,413 <cr>

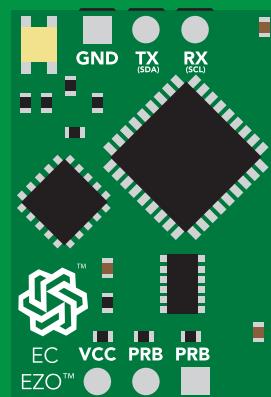

\*OK <cr>

Green

# Calibration

## Command syntax

Dry calibration must always be done first!

Cal,dry	<cr>	<b>dry calibration</b>
Cal,n	<cr>	<b>single point calibration, where n = any value</b>
Cal,low,n	<cr>	<b>low end calibration, where n = any value</b>
Cal,high,n	<cr>	<b>high end calibration, where n = any value</b>
Cal,clear	<cr>	<b>delete calibration data</b>
Cal,?	<cr>	<b>device calibrated?</b>

## Example

## Response

Cal,dry <cr>	*OK <cr>
Cal,84 <cr>	*OK <cr>
Cal,low,12880 <cr>	*OK <cr>
Cal,high,80000 <cr>	*OK <cr>
Cal,clear <cr>	*OK <cr>
Cal,? <cr>	?CAL,0 <cr> or ?CAL,1 <cr> or ?CAL,2 one point two point *OK <cr>

### One point calibration:

Step 1. "cal,dry"

Step 2. "cal,n"

**Calibration complete!**

### Two point calibration:

Step 1 "cal,dry"

Step 2 "cal,low,n"

Step 3 "cal,high.n"

**Calibration complete!**

# Changing the TDS (ppm) conversion factor

## Command syntax

There are several different conversion factors used to read TDS(ppm). For some applications, it may be necessary to use a conversion factor other than the default value of 0.54

**TDS,n <cr>** set custom conversion factor, n = any value between 0.01 – 1.00

**TDS,? <cr>** conversion factor being used

## Example

**TDS,? <cr>**

## Response

?TDS,0.54 <cr>  
\*OK <cr>

**R <cr>**

EC TDS  
↓ ↓  
**100,54 <cr>**  
\*OK <cr>

**TDS,0.46 <cr>**

\*OK <cr>

**R <cr>**

EC TDS  
↓ ↓  
**100,46 <cr>**  
\*OK <cr>

## Common conversion factors

NaCl 0.47 – 0.50

KCL 0.50 - 0.57

"442" 0.65 – 0.85

## Formula

**EC x conversion factor = TDS**

# Export calibration

## Command syntax

Export: Use this command to download calibration settings

**Export,? <cr>** calibration string info

**Export <cr>** export calibration string from calibrated device

## Example

Export,? <cr>

## Response

10,120 <cr>

### Response breakdown

10, 120

# of strings to export

# of bytes to export

Export strings can be up to 12 characters long,  
and is always followed by <cr>

Export <cr>

59 6F 75 20 61 72 <cr> (1 of 10)

Export <cr>

Export <cr>

\*DONE

Disabling \*OK simplifies this process

Export <cr>

\*DONE

# Import calibration

## Command syntax

Import: Use this command to upload calibration settings to one or more devices.

**Import,n <cr> import calibration string to new device**

## Example

Import, 59 6F 75 20 61 72 <cr> (1 of 10)

Import, 65 20 61 20 63 6F <cr> (2 of 10)

⋮

Import, 6F 6C 20 67 75 79 <cr> (10 of 10)

## Response

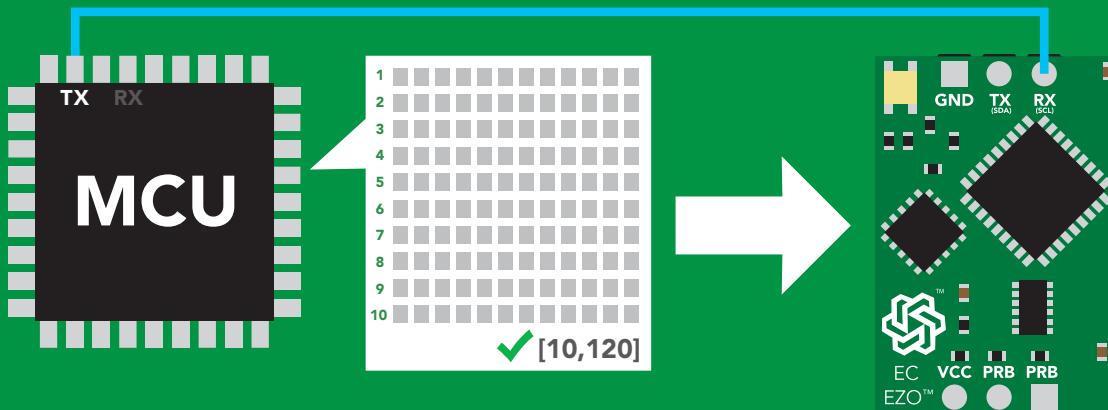

\*OK <cr>

\*OK <cr>

⋮

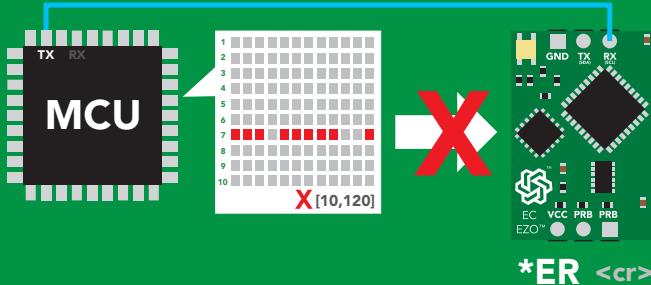

\*OK <cr>

**Import,n <cr>**

\*OK <cr>

system will reboot

\* If one of the imported strings is not correctly entered, the device will not accept the import, respond with \*ER and reboot.

# Setting the probe type

## Command syntax

K 1.0 is the default value

**K,n <cr>** n = any value; floating point in ASCII

**K,? <cr>** probe K value?

### Example

**K,10 <cr>**

### Response

**\*OK <cr>**

**K,? <cr>**

**?K,10 <cr>**

**\*OK <cr>**

**K 0.1**

**K 1.0**

**K 10**

# Temperature compensation

## Command syntax

Default temperature = 25°C  
Temperature is always in Celsius  
Temperature is not retained if power is cut

T,n <cr> n = any value; floating point or int

T,? <cr> compensated temperature value?

RT,n <cr> set temperature compensation and take a reading

## Example

T,19.5 <cr>

## Response

\*OK <cr>

RT,19.5 <cr>

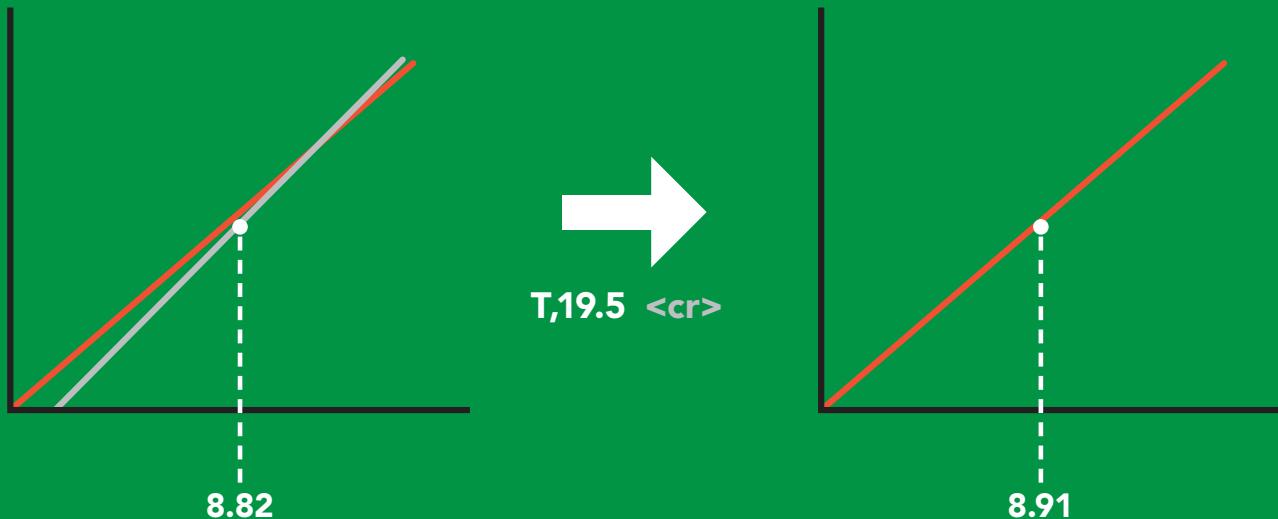

\*OK <cr>

8.91 <cr>

T,? <cr>

?T,19.5 <cr>

\*OK <cr>

# Enable/disable parameters from output string

## Command syntax

O, [parameter],[1,0] <cr> enable or disable output parameter

O,? <cr> enabled parameter?

### Example

O,EC,1 / O,EC,0 <cr>

### Response

\*OK <cr> enable / disable conductivity

O,TDS,1 / O,TDS,0 <cr>

\*OK <cr> enable / disable total dissolved solids

O,S,1 / O,S,0 <cr>

\*OK <cr> enable / disable salinity

O,SG,1 / O,SG,0 <cr>

\*OK <cr> enable / disable specific gravity

O,? <cr>

? ,O,EC,TDS,S,SG <cr> if all are enabled

### Parameters

EC Conductivity =  $\mu\text{S}/\text{cm}$

TDS Total dissolved solids = ppm

S Salinity = PSU (ppt) 0.00 – 42.00

SG Specific gravity (sea water only) = 1.00 – 1.300

\* If you disable all possible data types  
your readings will display "no output".

### Followed by 1 or 0

1 enabled

0 disabled

# Naming device

## Command syntax

Do not use spaces in the name

Name,n <cr> set name

n = 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Name, <cr> clears name

Up to 16 ASCII characters

Name,? <cr> show name

## Example

## Response

Name, <cr>

\*OK <cr> name has been cleared

Name,zzt <cr>

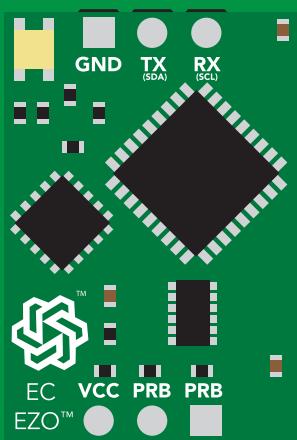

\*OK <cr>

Name,? <cr>

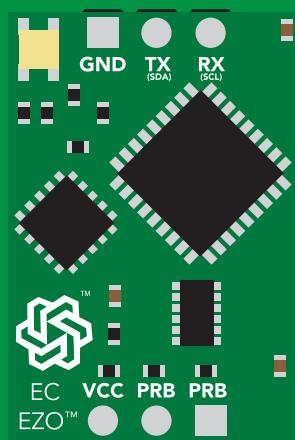

?Name,zzt <cr>

\*OK <cr>

Name,zzt

19200  
38400  
57600  
115200 ]

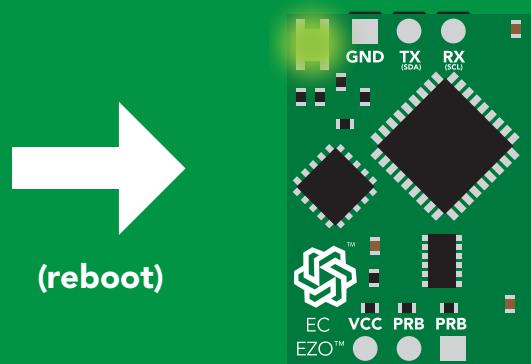

Standby

Changing  
baud rate

\*OK <cr>

Standby

# Protocol lock

## Command syntax

Locks device to UART mode.

Plock,1 <cr> enable Plock

Plock,0 <cr> disable Plock **default**

Plock,? <cr> Plock on/off?

## Example

Plock,1 <cr>

\*OK <cr>

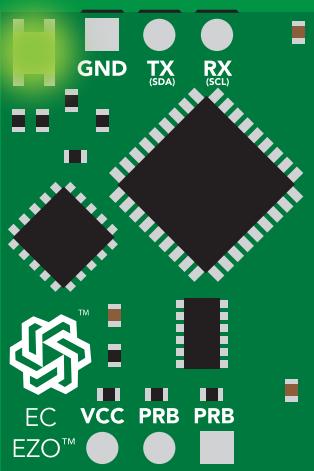

Plock,0 <cr>

\*OK <cr>

Plock,? <cr>

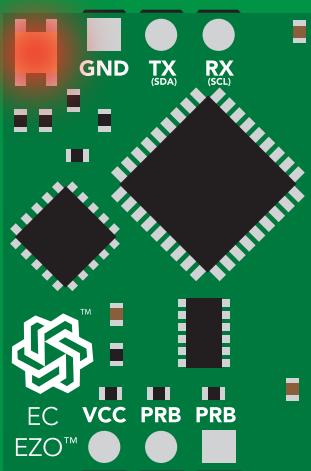

?Plock,1 <cr> or ?Plock,0 <cr>

## Response

\*OK <cr>

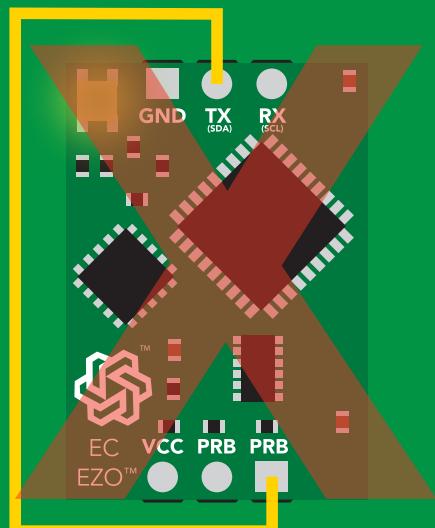

## I2C,100

cannot change to I<sup>2</sup>C

\*ER <cr>

## Short

cannot change to I<sup>2</sup>C

# Factory reset

## Command syntax

Clears calibration  
LED on  
"\*OK" enabled

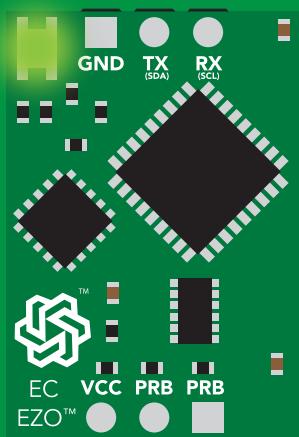

Factory <cr> enable factory reset

## Example Response

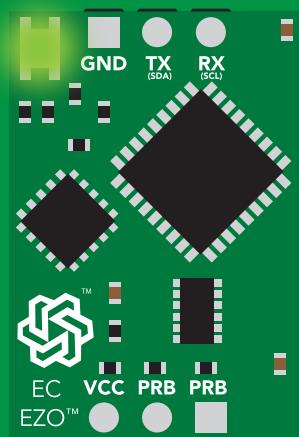

Factory <cr>

\*OK <cr>

Factory <cr>

(reboot)

\*OK <cr>

\*RS <cr>

\*RE <cr>

Baud rate will not change

# Change to I<sup>2</sup>C mode

## Command syntax

Default I<sup>2</sup>C address 100 (0x64)

I<sup>2</sup>C,n <cr> sets I<sup>2</sup>C address and reboots into I<sup>2</sup>C mode

n = any number 1 – 127

## Example      Response

I<sup>2</sup>C,100 <cr>

\*OK (reboot in I<sup>2</sup>C mode)

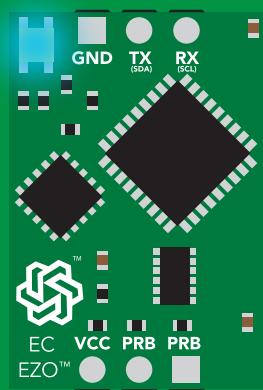

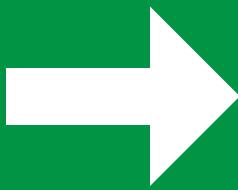

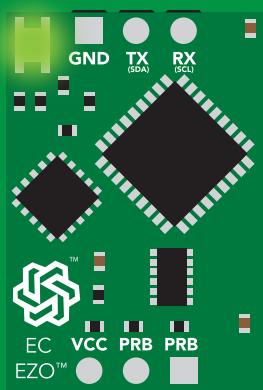

## Wrong example

I<sup>2</sup>C,139 <cr> n > 127

## Response

\*ER <cr>

I<sup>2</sup>C,100

Green  
\*OK <cr>

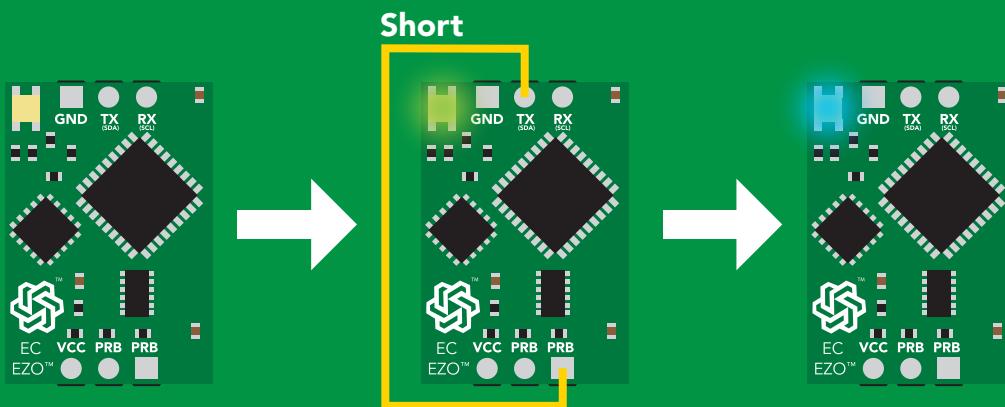

Blue  
now in I<sup>2</sup>C mode

# Manual switching to I<sup>2</sup>C

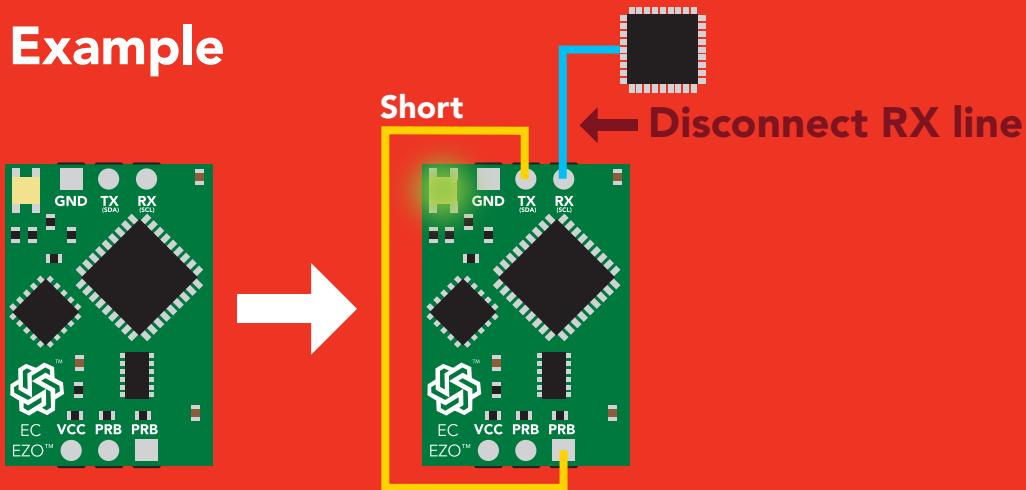

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to the right PRB
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Green to Blue
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I<sup>2</sup>C will set the I<sup>2</sup>C address to 100 (0x64)

## Example

## Wrong Example

# I<sup>2</sup>C mode

The I<sup>2</sup>C protocol is **considerably more complex** than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO™ device into I<sup>2</sup>C mode [click here](#)

## Settings that are retained if power is cut

Calibration  
Change I<sup>2</sup>C address

Cal,clear	 Wait 300ms	1	0	Null									
Cal,?	 Wait 300ms	1	?CAL,0	0	or	1	?CAL,1	0	or	1	?CAL,2	0	Null

## One point calibration:

#### Step 1. "cal,dry"

### Step 2. "cal.n"

**Calibration complete!**

## Two point calibration:

## Step 1 "cal,dry"

### Step 2 "cal\_low.n"

Step 3 "cal,high,n"

# Changing the TDS (ppm) conversion factor

300ms  processing delay

## Command syntax

There are several different conversion factors used to read TDS(ppm). For some applications, it may be necessary to use a conversion factor other than the default value of 0.54

TDS,n	set custom conversion factor, n = any value between 0.01 – 1.00
TDS,?	conversion factor being used

## Example Response

TDS,?

 Wait 300ms    1 Dec    ?TDS,0.54 ASCII    0 Null

R

 Wait 300ms    1 Dec    EC TDS  
↓ ↓    100,54 ASCII    0 Null

TDS,0.46

 Wait 300ms    1 Dec    0 Null

R

 Wait 300ms    1 Dec    EC TDS  
↓ ↓    100,46 ASCII    0 Null

## Common conversion factors

NaCl	0.47 – 0.50
KCL	0.50 - 0.57
"442"	0.65 – 0.85

## Formula

$$\text{EC} \times \text{conversion factor} = \text{TDS}$$

# Export calibration

300ms  processing delay

## Command syntax

Export: Use this command to download calibration settings

**Export,?** calibration string info

**Export** export calibration string from calibrated device

## Example

Baud, 9600

cannot change to UART

cannot change to UART

# I<sup>2</sup>C address change

## Command syntax

300ms  processing delay

I<sup>2</sup>C,n sets I<sup>2</sup>C address and reboots into I<sup>2</sup>C mode

## Example Response

I<sup>2</sup>C,101

device reboot

(no response given)

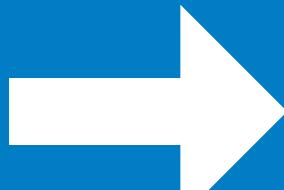

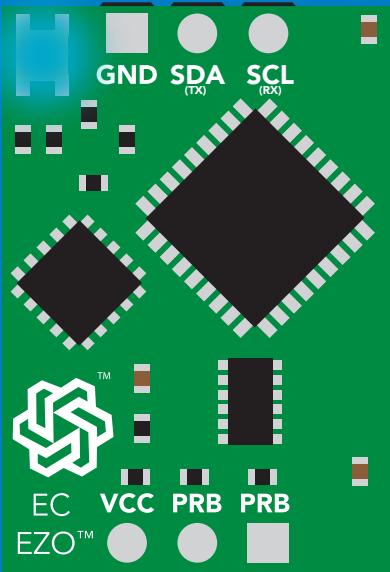

## Warning!

Changing the I<sup>2</sup>C address will prevent communication between the circuit and the CPU until your CPU is updated with the new I<sup>2</sup>C address.

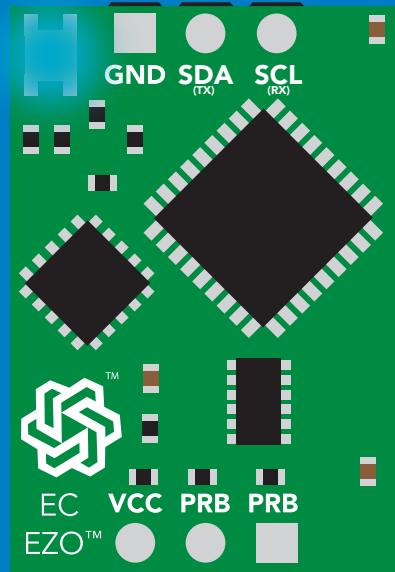

Default I<sup>2</sup>C address is 100 (0x64).

n = any number 1 – 127

I<sup>2</sup>C,101

(reboot)

# Factory reset

## Command syntax

Factory reset will not take the device out of I<sup>2</sup>C mode.

Factory enable factory reset

I<sup>2</sup>C address will not change

## Example Response

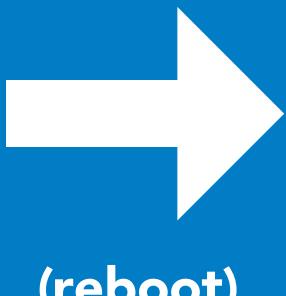

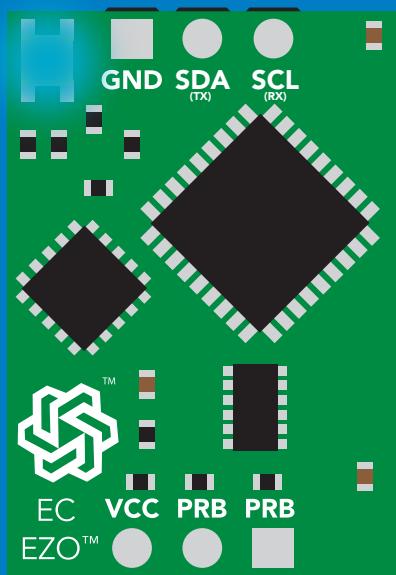

Factory

device reboot

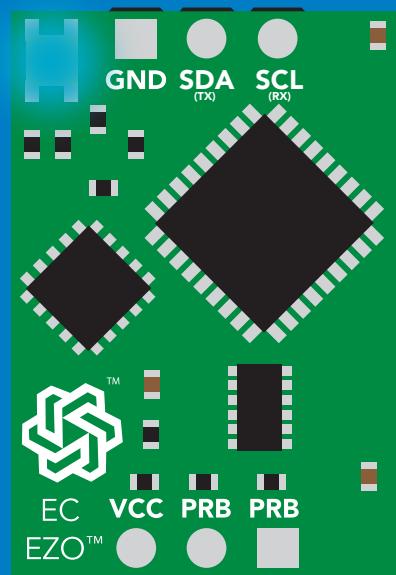

(no response given)

Clears calibration  
LED on  
Response codes enabled

Factory

(reboot)

# Change to UART mode

## Command syntax

Baud,n switch from I<sup>2</sup>C to UART

### Example

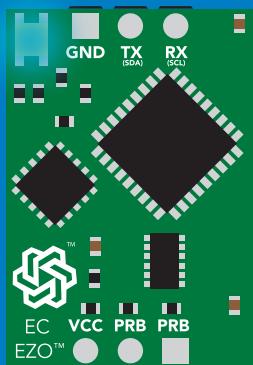

Baud,9600

### Response

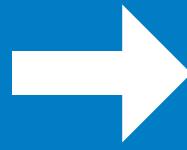

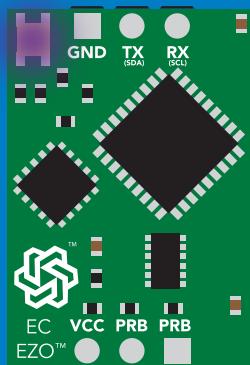

reboot in UART mode

(no response given)

n = [ 300  
1200  
2400  
9600  
19200  
38400  
57600  
115200 ]

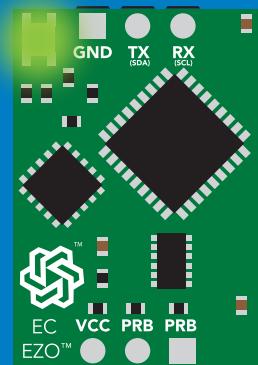

Baud,9600

(reboot)

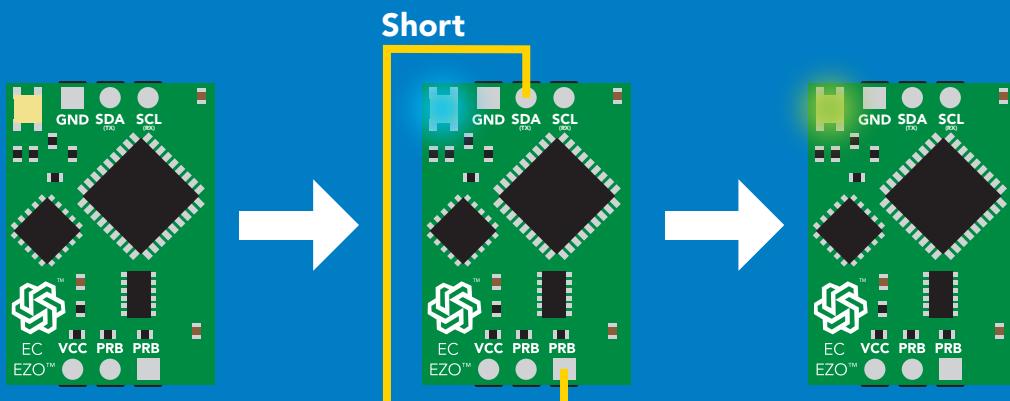

Changing to  
UART mode

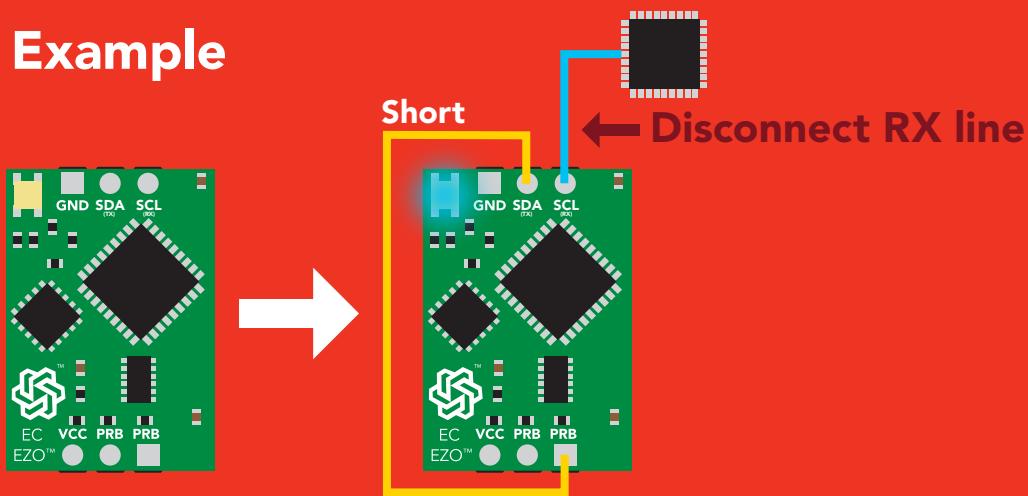

# Manual switching to UART

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to the right PRB
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

## Example

## Wrong Example

# Calibration theory

The accuracy of your readings is directly related to the quality of your calibration.  
(Calibration is not difficult, and a little bit of care goes a long way)

A properly calibrated conductivity probe will never need recalibration. Once calibrated, you can use the probe continuously year after year without concern. This is because a conductivity probe does not contain any parts that wear out over time.

However, changing the cable length of the probe or moving the EZO-EC circuit from one machine to another may require recalibration. This is because such actions will change the electrical properties of the probe or EC circuit.

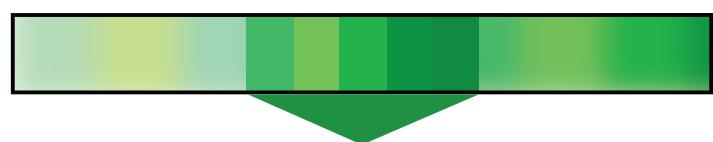

# Two point or Three point calibration

## No calibration

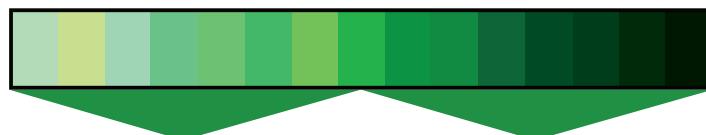

Approximation

## Single point calibration

Narrow band accuracy

## Two point calibration

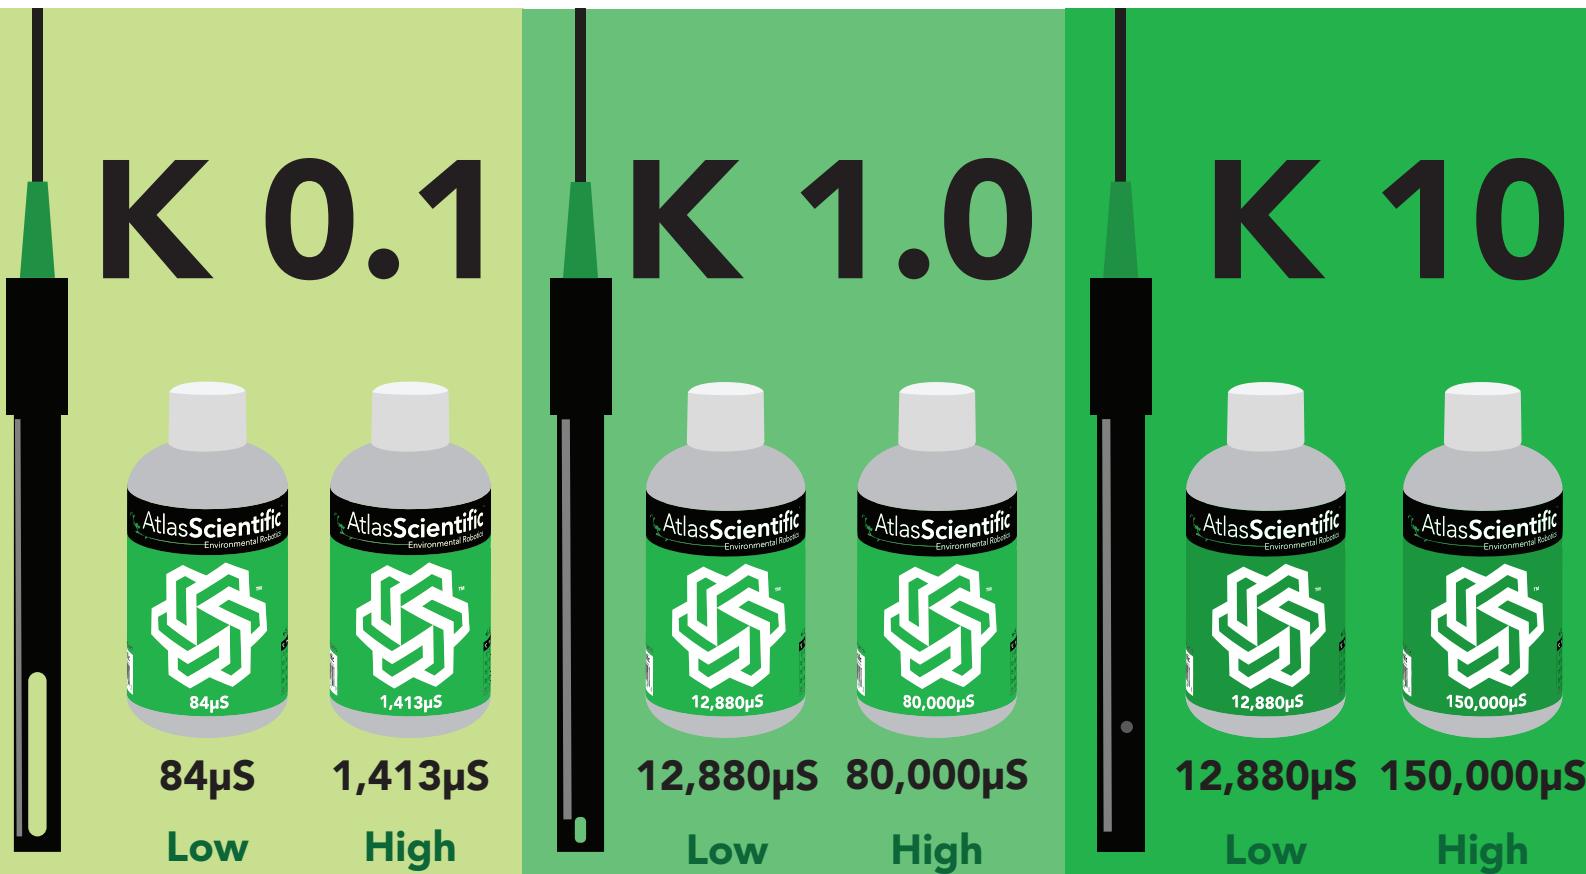

Low point

High point

Wide range accuracy

## Recommended calibration points

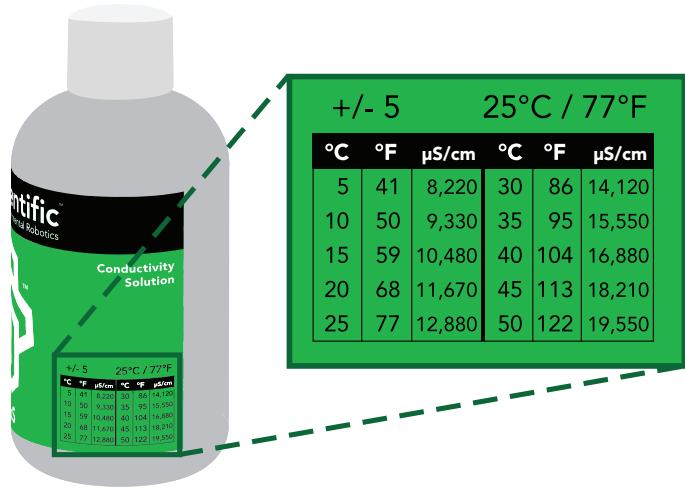

When calibrating, Atlas Scientific recommends using the above  $\mu\text{S}$  values. However, you can use any  $\mu\text{S}$  values you want.

# Temperature compensation during calibration

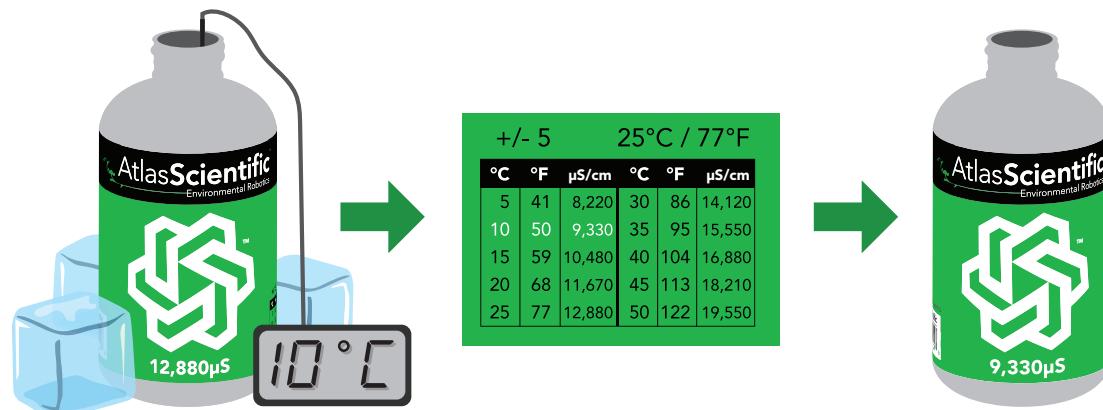

Temperature has a significant effect on conductivity readings. The EZO™ Conductivity circuit has its temperature compensation set to 25° C as the default. **At no point should you change the default temperature compensation during calibration.**

If the solution is +/- 5° C (or more), refer to the chart on the bottle, and calibrate to that value.

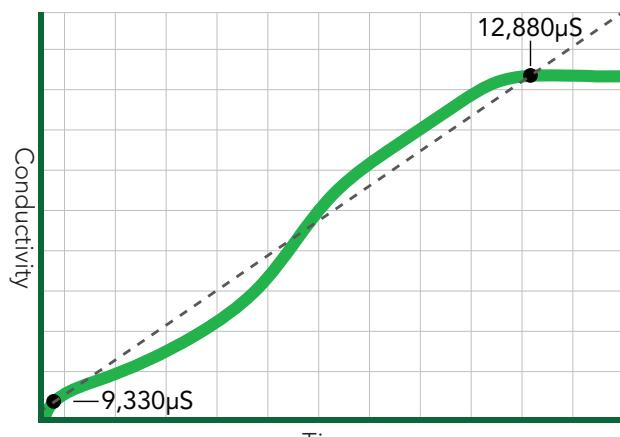

## Temperature compensation example

For this example, we brought the temperature of the solution down to 10° C. Referring to chart on the bottle, you can see the value you should calibrate to is **9,330μS**.

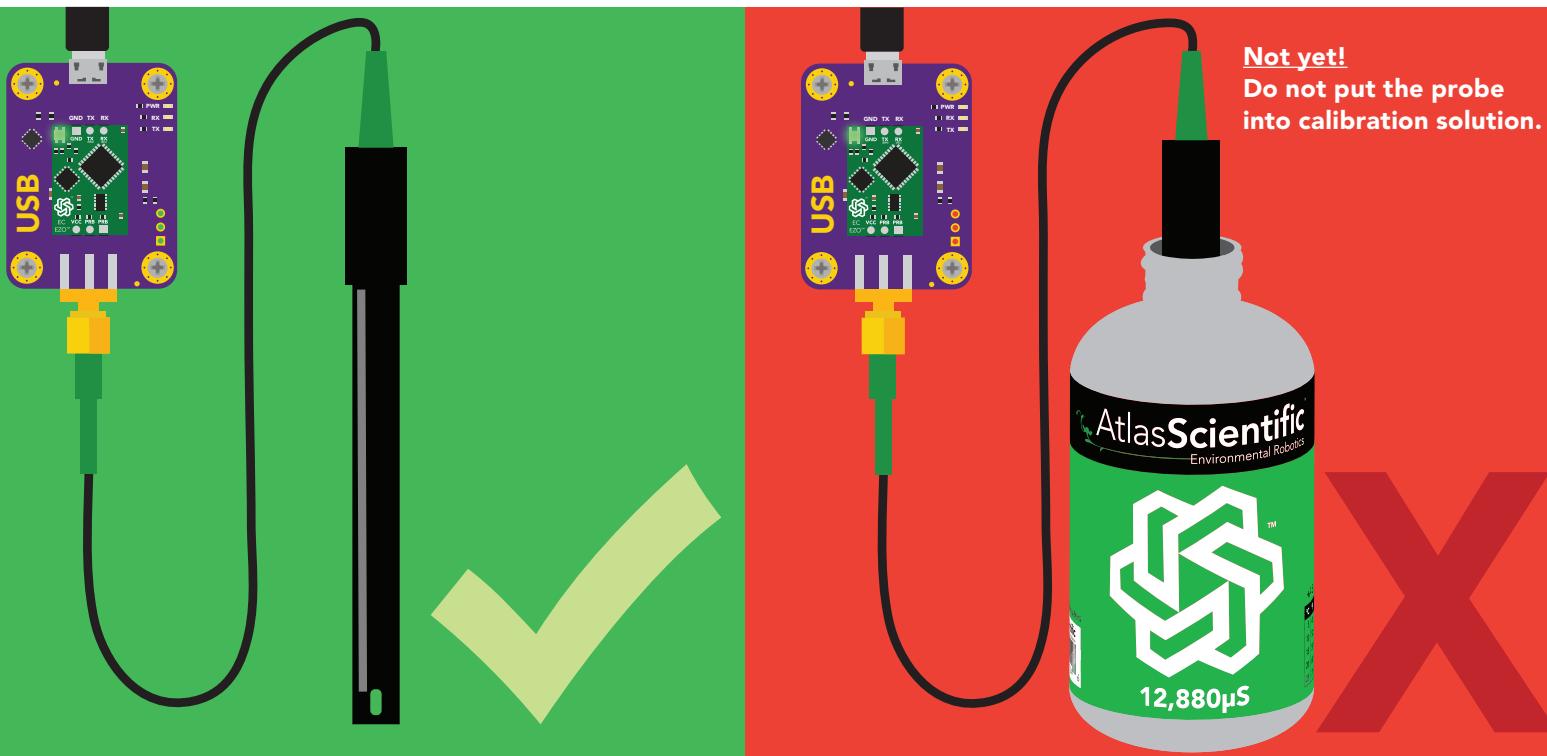

Over time, the readings will normalize as the solution warms to 25° C.

See pages **27** or **54** for more information.

# 1. Pre-calibration setup

Connect the dry conductivity probe and take continuous readings.

## 2. Set probe type

If your probe  $\neq$  K 1.0 (*default*), then set the probe type by using the "**K,n**" command.  
(where  $n = K$  value of your probe) for more information, see page [26](#) or [53](#).

## 3. Dry calibration

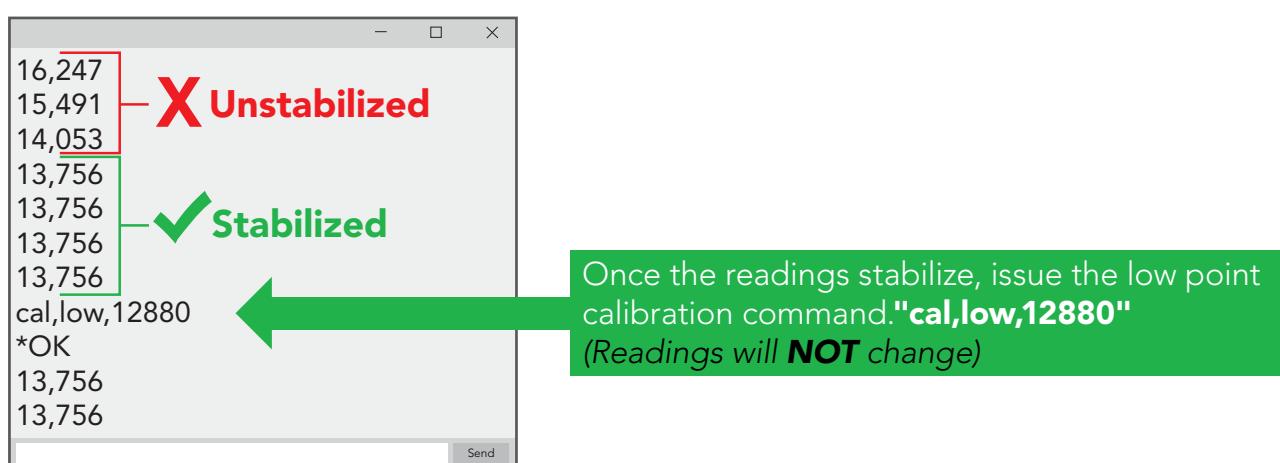

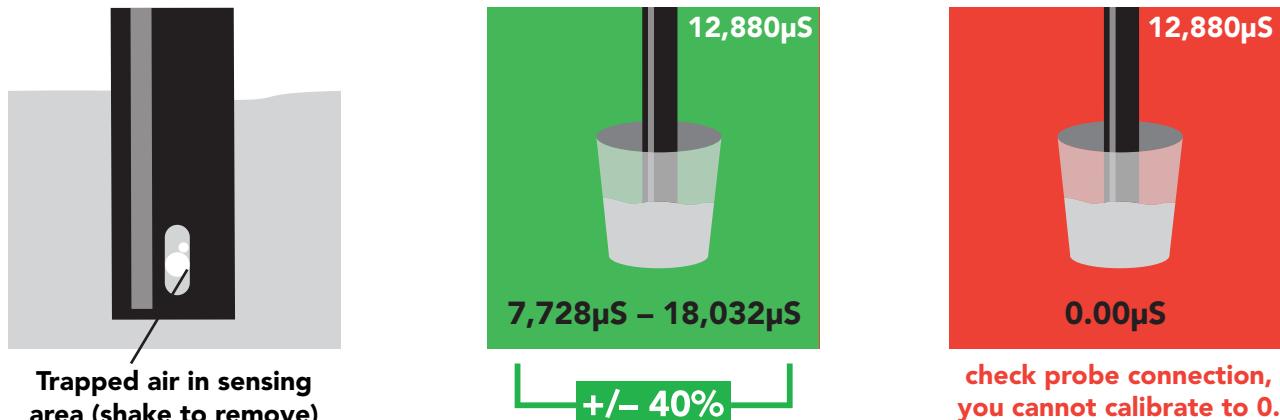

Perform a dry calibration using the command "**Cal,dry**". Even though you may see readings of 0.00 before issuing the "**Cal,dry**" command, it is still a necessary part of calibration.

00.00 → "Cal,dry" → 0.00 ✓ Correct

17.00 → "Cal,dry" → 0.00 ✓ Also correct

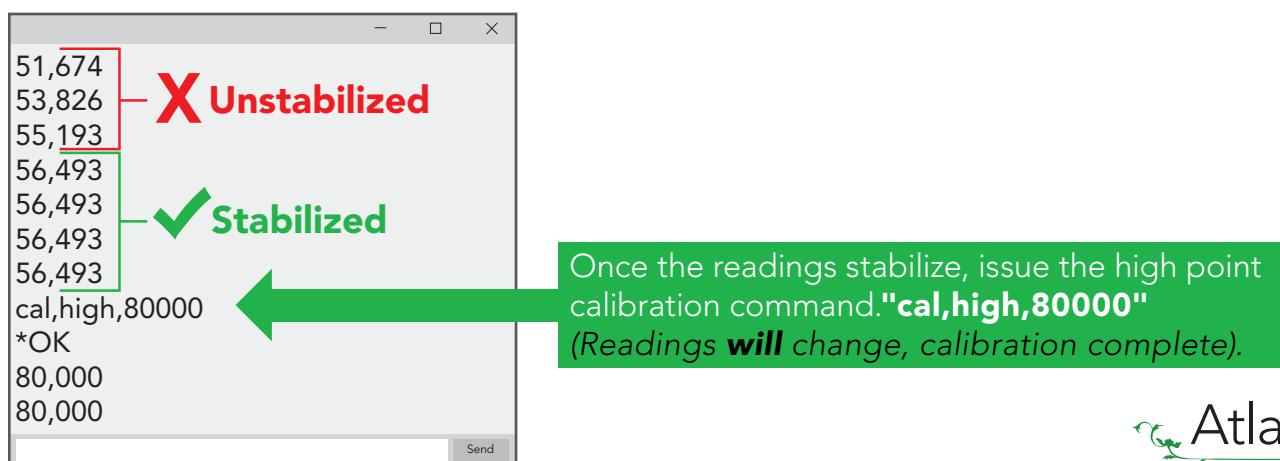

## Two point calibration - low point

Pour a small amount of the low point calibration solution into a cup. Shake the probe to make sure you do not have trapped air bubbles in the sensing area. You should see readings that are off by **1 – 40%** from the stated value of the calibration solution. Wait for readings to stabilize (small movement from one reading to the next is normal).

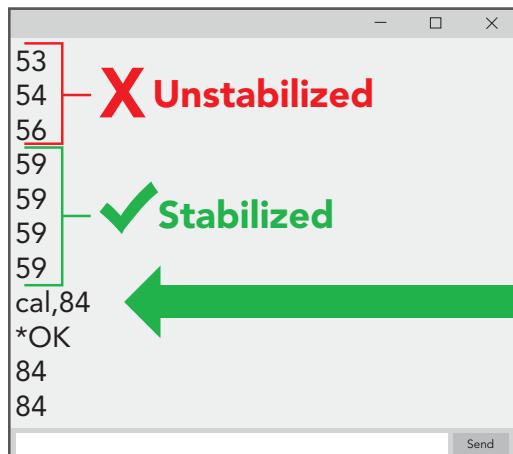

## Two point calibration - high point

- Rinse off the probe before calibrating to the high point.
- Pour a small amount of the high point calibration solution into a cup.
- Shake the probe to remove trapped air.
- Readings may be off by +/- 40%
- Wait for readings to stabilize.

## Single point calibration

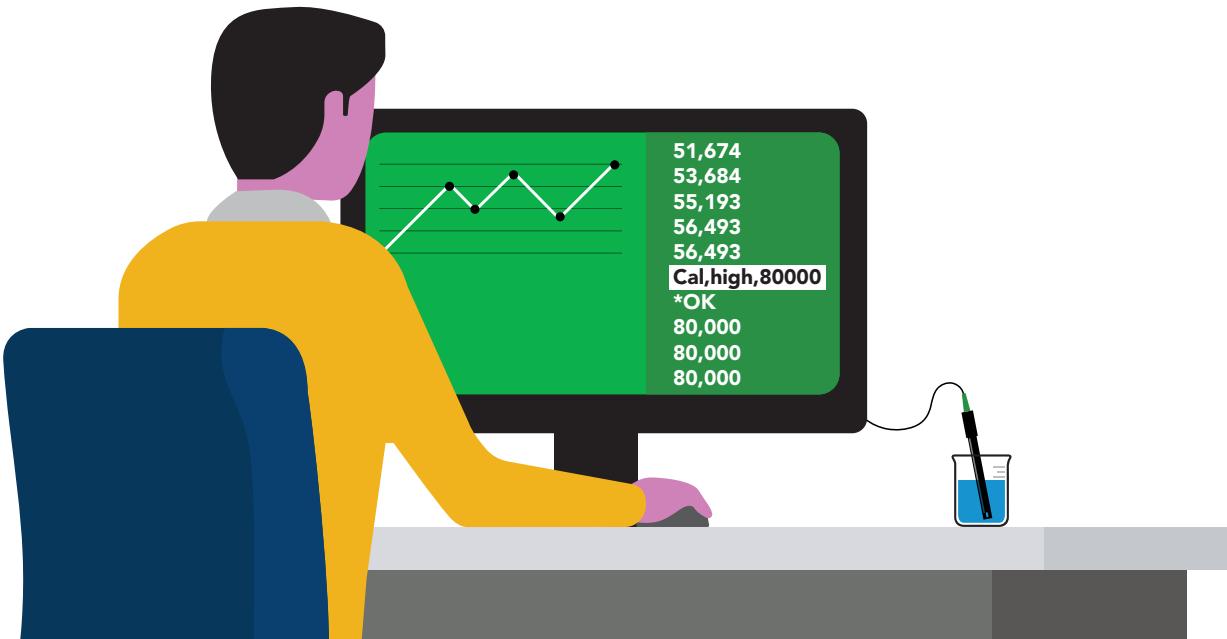

- Pour a small amount of calibration solution into a cup ( $\mu\text{S}$  value of your choice).
- Shake the probe to remove trapped air.
- Readings may be off by +/- 40%
- Wait for readings to stabilize.

Once the readings stabilize, issue the single point calibration command. "cal,n" where n = any value.  
(Readings **will** change, calibration complete).a

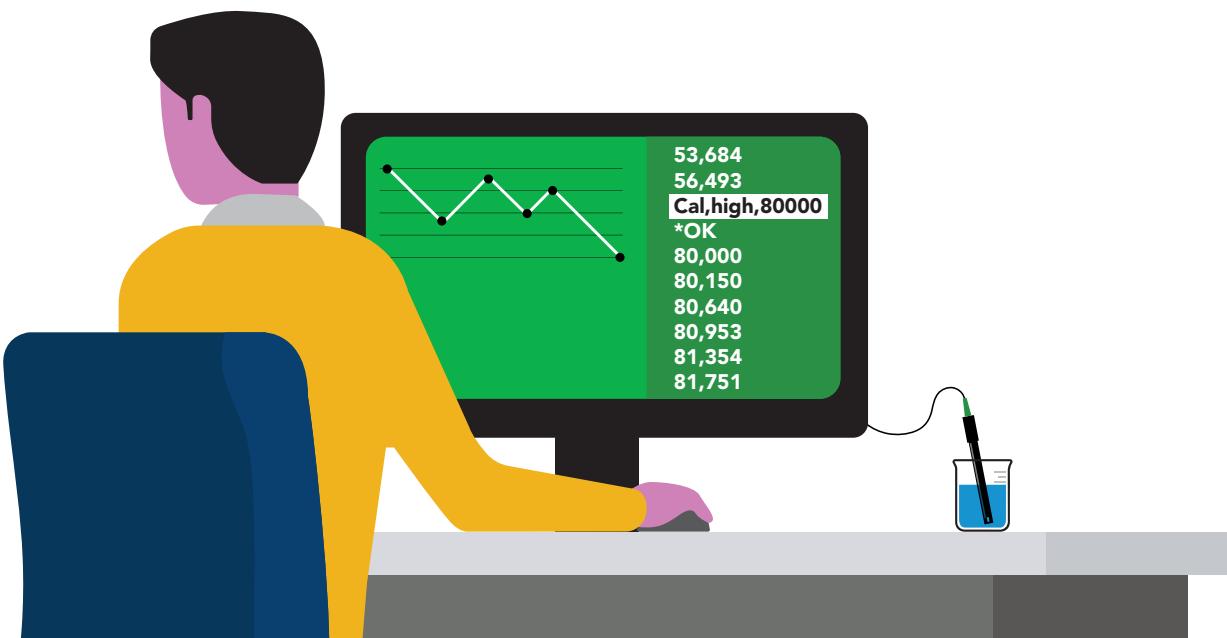

# Best practices for calibration

Always watch the readings throughout the calibration process.  
Issue calibration commands once the readings have stabilized.

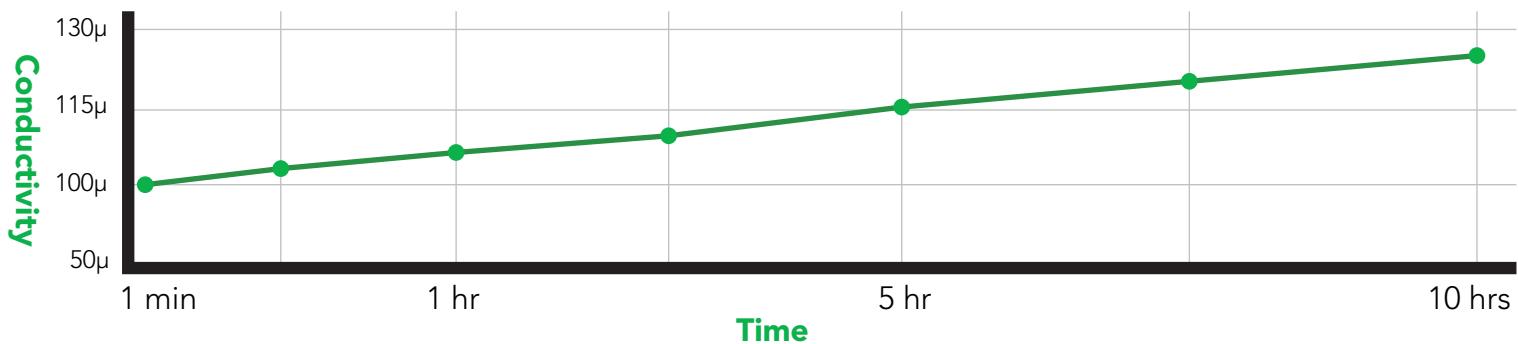

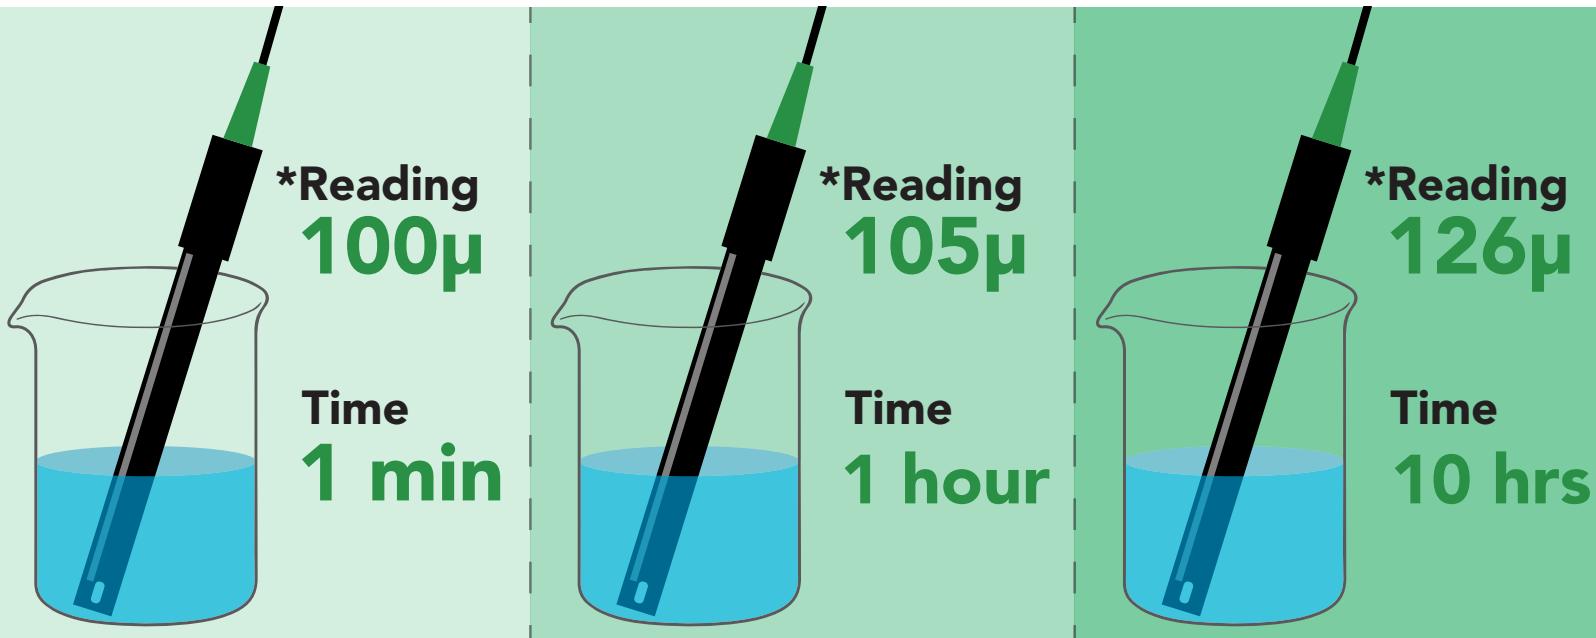

## ⚠ Never do a blind calibration! ⚠

Issuing a calibration command before the readings stabilize will result in drifting readings.

# Long-term conductivity measurements in stagnant water

Taking continuous conductivity readings in stagnant water:

A small amount of energy must be put into the water to measure conductivity. This small amount of energy will start to affect the readings in stagnant water. Over time, the energy passing through the stagnant water will start to align the dissolved salts along a path of least resistance. Lowering the resistance of the water will increase the water's conductivity.

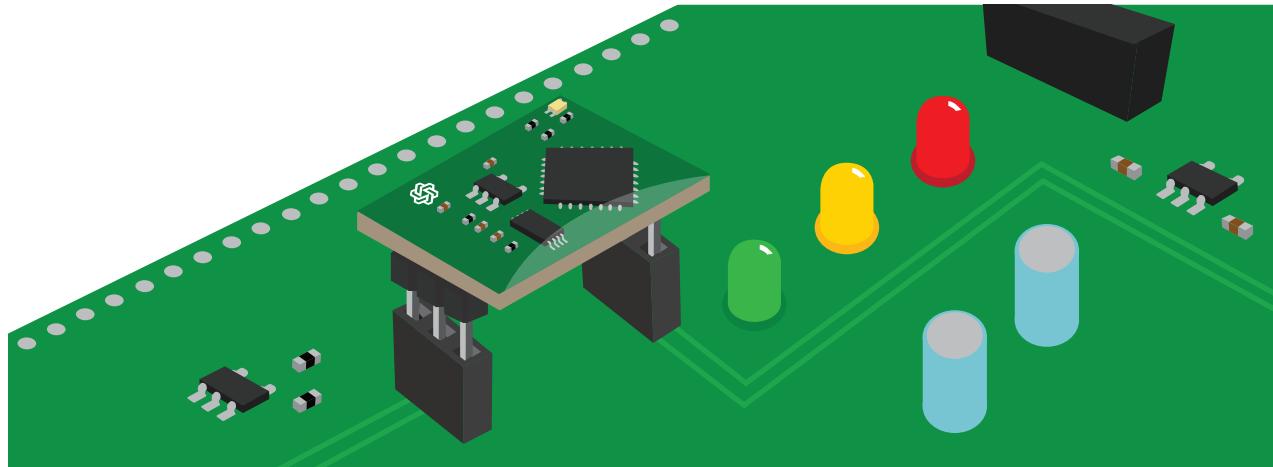

Moving the probe or the water will disrupt this alignment and cause the readings to suddenly return to normal.

**\*These are example readings; there is no way to predict how the readings will change over time.**

# Soldering

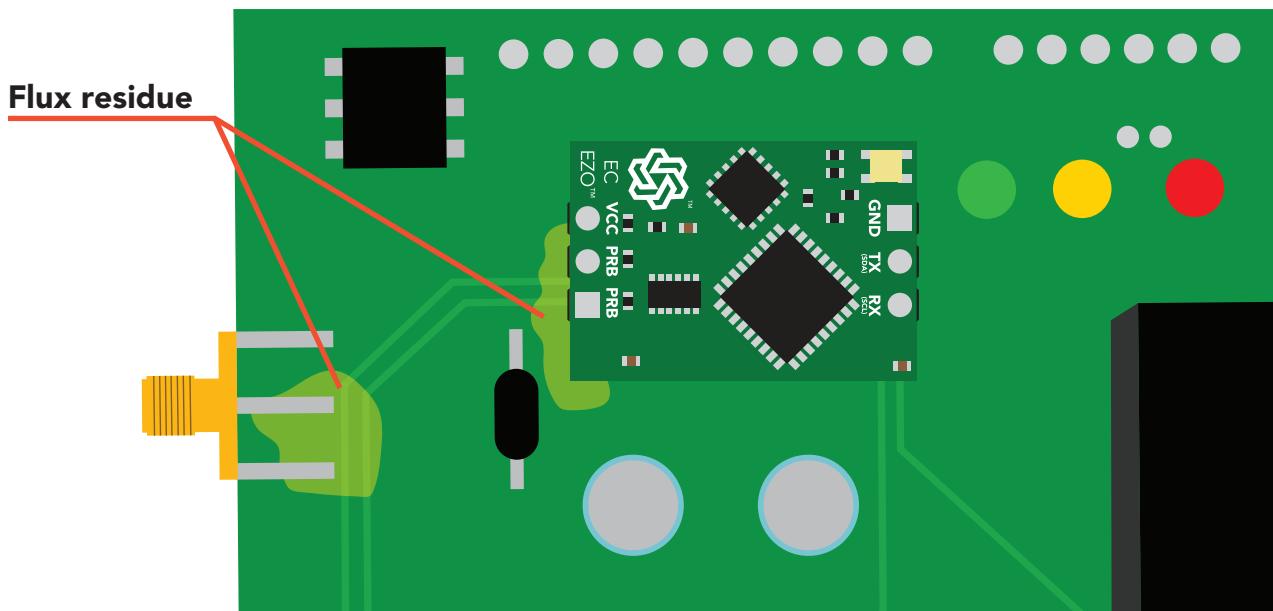

**Do not directly solder an EZO circuit to your PCB.** If something goes wrong during the soldering process it may become impossible to correct the problem. It is simply not worth the risk.

Instead, solder female header pins to your PCB and place the EZO device in the female headers.

**Avoid using rosin core solder.  
Use as little flux as possible.**

**Flux residue will severely affect your readings.** Any Flux residue that comes in contact with the PRB pins or your probes connector will cause a "flux short".

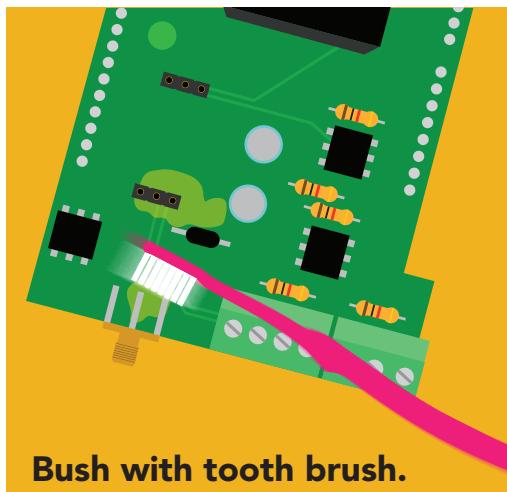

You **MUST** remove all the flux residue from your PCB after soldering.

# Soldering

Removing flux residue can be done with commercially available products such as flux off or you can use alcohol and a tooth brush.

Remove EZO Circuit and soak in alcohol for 10 mins.

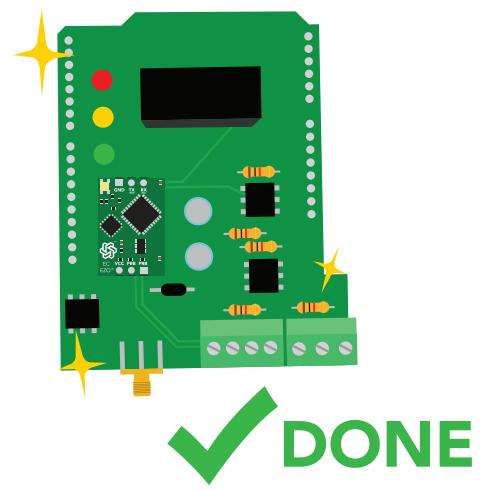

Bush with tooth brush.

Soak in alcohol for 5 mins.

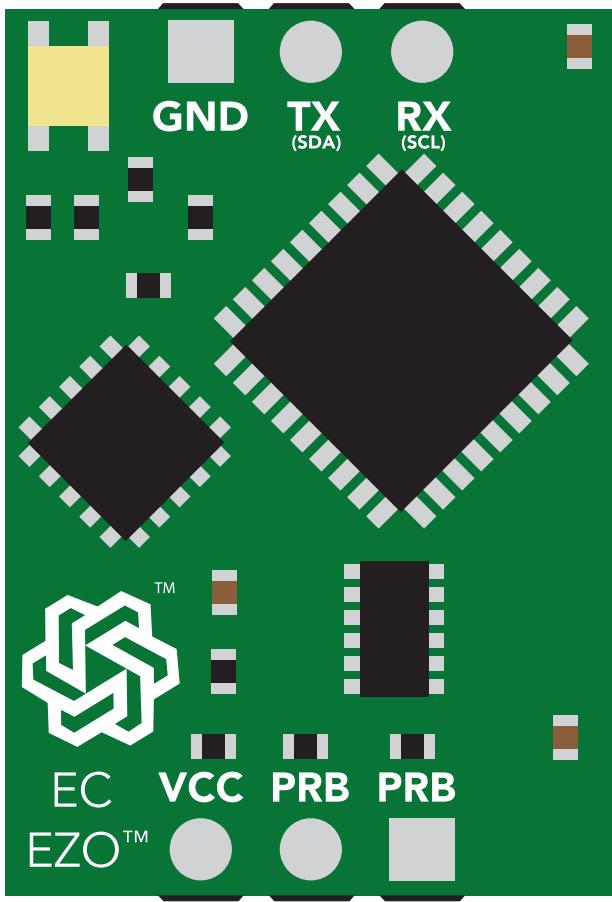

Let it dry in the air.

## What does a flux short look like?

Readings move slowly and take serval minutes to reach the correct value.

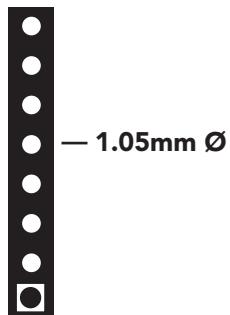

# EZO™ circuit footprint

**2.54mm  
(0.1")**

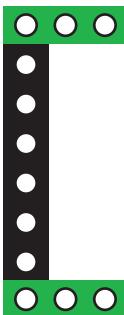

**17.78mm  
(0.7")**

**1** In your CAD software,  
place a 8 position header.

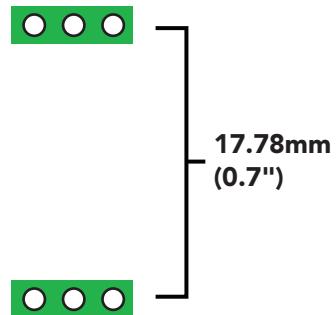

**— 1.05mm Ø**

**2** Place a 3 position header at both  
top and bottom of the 8 position.

**3** Delete the 8 position header. The two 3  
position headers are now 17.78mm (0.7")  
apart from each other.

**17.78mm  
(0.7")**

# Datasheet change log

## Datasheet V 6.4

Revised entire document.

## Datasheet V 6.3

Revised naming device info on pages 36 & 63.

## Datasheet V 6.2

### **Added new command:**

"TDS,n" Changing the TDS (ppm) conversion factor on pages 30 (UART) & 57 (I<sup>2</sup>C).

## Datasheet V 6.1

Corrected typos within the datasheet.

## Datasheet V 6.0

Changed the K value range from 0.1 to 0.01 on pg 5.

## Datasheet V 5.9

Moved Default state to pg 17.

## Datasheet V 5.8

Revised conductivity probe range information on pg 5.

## Datasheet V 5.7

Revised response for the sleep command in UART mode on pg 39.

## Datasheet V 5.6

Added more information on the Export calibration and Import calibration commands.

## Datasheet V 5.5

Revised calibration theory pages, added information on temperature compensation on pg. 15, moved data isolation to pg 9, and correct wiring to pg 11.

## Datasheet V 5.4

Revised isolation schematic on pg. 13

## Datasheet V 5.3

### Added new command:

"RT,n" for Temperature compensation located on pages 30 (UART) & 55 (I<sup>2</sup>C).  
Added firmware information to Firmware update list.

## Datasheet V 5.2

Revised calibration information on pages 27 & 52.

## Datasheet V 5.1

Added more information about temperature compensation on pages 30 & 55.

## Datasheet V 5.0

Changed "Max rate" to "Response time" on cover page.

## Datasheet V 4.9

Removed note from certain commands about firmware version.  
Added steps to calibration command pages 27 (UART) and 52 (I<sup>2</sup>C).

## Datasheet V 4.8

Revised definition of response codes on pg 46.

## Datasheet V 4.7

Revised cover page art.

## Datasheet V 4.6

Updated calibration processing delay time on pg.52.

## Datasheet V 4.5

Revised Enable/disable parameters information on pages 31 & 56.

## Datasheet V 4.4

Updated High point calibration info on page 11.

## Datasheet V 4.3

Updated calibration info on pages 27 (UART) and 52 (I<sup>2</sup>C).

## **Datasheet V 4.2**

Revised Plock pages to show default value.

## **Datasheet V 4.1**

Corrected I<sup>2</sup>C calibration delay on pg. 52.

## **Datasheet V 4.0**

Revised entire datasheet.

# Firmware updates

V1.0 – Initial release (April 17, 2014)

V1.1 – (June 2, 2014)

- Change specific gravity equation to return 1.0 when the uS reading is < 1000 (previously returned 0.0)
- Change accuracy of specific gravity from 2 decimal places to 3 decimal places
- Don't save temperature changes to EEPROM

V1.2 – (Aug 1, 2014)

- Baud rate change is now a long, purple blink

V1.5 – Baud rate change (Nov 6, 2014)

- Change default baud rate to 9600

V1.6 – I<sup>2</sup>C bug (Dec 1, 2014)

- Fixed I<sup>2</sup>C bug where the circuit may inappropriately respond when other I<sup>2</sup>C devices are connected

V1.8 – Factory (April 14, 2015)

- Changed "X" command to "Factory"

V1.95 – Plock (March 31, 2016)

- Added protocol lock feature "Plock"

V1.96 – EEPROM (April 26, 2016)

- Fixed bug where EEPROM would get erased if the circuit lost power 900ms into startup  
This would cause the EZO circuit to revert back to UART mode if set to I<sup>2</sup>C

V2.10 – (April 12, 2017)

- Added "Find" command.
- Added "Export/import" command.
- Modified continuous mode to be able to send readings every "n" seconds.
- Default output changed from CSV string of 4 values to just conductivity; Other values must be enabled

V2.11 – (April 28, 2017)

- Fixed "Sleep" bug, where it would draw excessive current.

V2.12 – (May 9, 2017)

- Fixed bug in sleep mode, where circuit would wake up to a different I<sup>2</sup>C address.

V2.13 – (July 16, 2018)

- Added "RT" command to Temperature compensation

V2.14 – (Nov 26, 2019)

- The K value range has been extended to 0.01

V2.15 – (June 29, 2020)

- Fixed bug where output doesn't always round to 0

# Firmware updates

V2.16 – (Dec 14, 2021)

- Internal update for new part compatibility.

# Warranty

Atlas Scientific™ Warranties the EZO™ class Conductivity circuit to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO™ class Conductivity circuit (which ever comes first).

## The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO™ class Conductivity circuit is inserted into a bread board, or shield. If the EZO™ class Conductivity circuit is being debugged in a bread board, the bread board must be devoid of other components. If the EZO™ class Conductivity circuit is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO™ class Conductivity circuit exclusively and output the EZO™ class Conductivity circuit data as a serial string.

**It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO™ class Conductivity circuit warranty:**

- **Soldering any part of the EZO™ class Conductivity circuit.**
- **Running any code, that does not exclusively drive the EZO™ class Conductivity circuit and output its data in a serial string.**
- **Embedding the EZO™ class Conductivity circuit into a custom made device.**
- **Removing any potting compound.**

# Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO™ class Conductivity circuit, against the thousands of possible variables that may cause the EZO™ class Conductivity circuit to no longer function properly.

## Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO™ class Conductivity circuits continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
